A Theory Of Case Based Decisions:

A Theory of Case-Based Decisions Itzhak Gilboa, David Schmeidler, 2001-07-26 This work a paradigm for modelling decision making under uncertainty describes the general theory and its relationship to planning repeated choice problems inductive inference and learning and highlights its mathematical and philosophical foundations

Theory of Case-Based Decisions Itzhak Gilboa, David Schmeidler, 2001 Gilboa and Schmeidler provide a new paradigm for modelling decision making under uncertainty one which suggests that people make decisions by analogies to past cases The authors describe the general theory and its relationship to planning repeated choice problems inductive inference and learning

Uncertain Computation-based Decision Theory Rafik Aziz Aliev, 2017-12-06 Uncertain computation is a system of computation and reasoning in which the objects of computation are not values of variables but restrictions on values of variables This compendium includes uncertain computation examples based on interval arithmetic probabilistic arithmetic fuzzy arithmetic Z number arithmetic and arithmetic with geometric primitives The principal problem with the existing decision theories is that they do not have capabilities to deal with such environment Up to now no books where decision theories based on all generalizations level of information are considered Thus this self containing volume intends to overcome this gap between real world settings decisions and their formal analysis

Computational Intelligence: Theory and Applications Bernd Reusch, 2007-07-16 Fuzzy Days in Dortmund were held for the first time in 1991 Initially the conference was intended for scientists and practitioners as a platform for discussions on theory and application of fuzzy logic Early on synergetic links with neural networks were included and the conference evolved gradually to embrace the full spectrum of what is now called Computational Intelligence CI Therefore it seemed logical to launch the 4th Fuzzy Days in 1994 as a conference for CI one of the world s first conferences featuring fuzzy logic neural networks and evolutionary algorithms together in one event Following this successful tradition the 6th Fuzzy Days aim is to provide an international forum for reporting significant results on the theory and application of CI methods Once again we have received a remarkable number of papers I would like to express my gratitude to all who have been interested in presenting their work within the framework of this conference and to the members of the programme committee for their valuable work in this edition each paper was reviewed by five referees In particular I wish to thank all keynote and tutorial speakers for their commitment Last but not least I am obliged to the Deutsche Forschungsgemeinschaft and Kommunalverband Ruhrgebiet for their financial support

Connectionist Approaches in Economics and Management Sciences Cédric Lesage, Marie Cottrell, 2013-03-09 Since the beginning of the 1980 s a lot of new approaches of biomimetic inspiration have been defined and developed for imitating the brain behavior for modeling non linear phenomenon for providing new hardware architectures for solving hard problems They are named Neural Networks Multilayer Perceptrons Genetic algorithms Cellular Automates Self Organizing maps Fuzzy Logic etc They can be summarized by the word of Connectionism and consist of an interdisciplinary domain between neuroscience cognitive

science and engineering First they were applied in computer sciences engineering biological models pattern recognition motor control learning algorithms etc But rapidly it appeared that these methods could be of great interest in the fields of Economics and Management Sciences The main difficulty was the distance between researchers the difference in the vocabulary used by the ones and the others their basic background The main notions used by these new techniques were not familiar to the Social and Human Sciences researchers What are they Four of them are now very briefly introduced but the reader will find more information in the following chapters

Case-Based Reasoning Beatriz López,2022-05-31 Case based reasoning is a methodology with a long tradition in artificial intelligence that brings together reasoning and machine learning techniques to solve problems based on past experiences or cases Given a problem to be solved reasoning involves the use of methods to retrieve similar past cases in order to reuse their solution for the problem at hand Once the problem has been solved learning methods can be applied to improve the knowledge based on past experiences In spite of being a broad methodology applied in industry and services case based reasoning has often been forgotten in both artificial intelligence and machine learning books The aim of this book is to present a concise introduction to case based reasoning providing the essential building blocks for the design of case based reasoning systems as well as to bring together the main research lines in this field to encourage students to solve current CBR challenges

Case-Based Decision Support for Disaster Management Möhrle, Stella,2020-07-01 Disasters are characterized by severe disruptions of the society's functionality and adverse impacts on humans the environment and economy that cannot be coped with by society using its own resources This work presents a decision support method that identifies appropriate measures for protecting the public in the course of a nuclear accident The method particularly considers the issue of uncertainty in decision making as well as the structured integration of experience and expert knowledge

Theory of Decision Under Uncertainty Itzhak Gilboa,2009-03-16 This book describes the classical axiomatic theories of decision under uncertainty as well as critiques thereof and alternative theories It focuses on the meaning of probability discussing some definitions and surveying their scope of applicability The behavioral definition of subjective probability serves as a way to present the classical theories culminating in Savage's theorem The limitations of this result as a definition of probability lead to two directions first similar behavioral definitions of more general theories such as non additive probabilities and multiple priors and second cognitive derivations based on case based techniques

Behavioral Game Theory Russell Golman,2021-01-07 How do interacting decision makers make strategic choices If they're rational and can somehow predict each other's behavior they may find themselves in a Nash equilibrium However humans display pervasive and systematic departures from rationality They often do not conform to the predictions of the Nash equilibrium or its various refinements This has led to the growth of behavioral game theory which accounts for how people actually make strategic decisions by incorporating social preferences bounded rationality for example limited iterated reasoning and learning from experience This book brings together new advances in the field of

behavioral game theory that help us understand how people actually make strategic decisions in game theoretic situations

The Complex Networks of Economic Interactions Akira Namatame, Taisei Kaizouji, Yuuji Aruka, 2006-03-09 Understanding the mechanism of a socio economic system requires more than an understanding of the individuals that comprise the system. It also requires understanding how individuals interact with each other and how the aggregated outcome can be more than the sum of individual behaviors. This book contains the papers fostering the formation of an active multi disciplinary community on socio economic systems with the exciting new fields of agent based modeling and econophysics. We especially intend to increase the awareness of researchers in many fields with sharing the common view many economic and social activities as collectives of a large scale heterogeneous and interacting agents. Economists seek to understand not only how individuals behave but also how the interaction of many individuals leads to complex outcomes. Agent based modeling is a method for studying socio economic systems exhibiting the following two properties: 1 the system is composed of interacting agents and 2 the system exhibits emergent properties that is properties arising from the interactions of the agents that cannot be deduced simply by aggregating the properties of the system's components. When the interaction of the agents is contingent on past experience and especially when the agents continually adapt to that experience mathematical analysis is typically very limited in its ability to derive the outcome.
