The Hair of the Dog Karl Sabbagh, 2010-11-11 Science is full of surprises the peculiar peepshow beginnings of baby incubators the unexpected positive fallout from the H bomb the dinosaurs that caused sonic booms the irrational nature of the number pi the fifth taste sensation lurking in everyone's taste buds which nobody knew about except for the Japanese Whilst shedding light on these conundrums Karl Sabbagh shows that seemingly trivial queries or assumptions lead to a deeper understanding of how science works Who would have thought that scientists would turn to the hypothesis All swans are white to determine the stability of the entire universe Or that if we choose to spend our hard earned money on other people it might make us happier than if we spend it on ourselves Firefighting Operations in High-Rise and Standpipe-Equipped Buildings David M. Models. Behaving. Badly. Emanuel Derman, 2011-10-13 Emanuel Derman was a quantitative analyst Quant at Goldman Sachs one of the financial engineers whose mathematical models became crucial for Wall Street The reliance investors put on such quantitative analysis was catastrophic for the economy setting off the ongoing string of financial crises that began with the mortgage market in 2007 and continues through today Here Derman looks at why people bankers in particular still put so much faith in these models and why it's a terrible mistake to do so Though financial models imitate the style of physics and employ the language of mathematics ultimately they deal with human beings There is a fundamental difference between the aims and potential achievements of physics and those of finance In physics theories aim for a description of reality in finance at best models can shoot only for a simplistic and very limited approximation to it When we make a model involving human beings we are trying to force the ugly stepsister's foot into Cinderella's pretty glass slipper It doesn't fit without cutting off some of the essential parts Physicists and economists have been too enthusiastic to acknowledge the limits of their equations in the sphere of human behavior which of course is what economics is all about Models Behaving Badly includes a personal account of Derman's childhood encounters with failed models the oppressions of apartheid and the utopia of the kibbutz He describes his experience as a physicist on Wall Street the models quants generated the benefits they brought and the problems practical and ethical they caused Derman takes a close look at what a model is and then highlights the differences between the successes of modeling in physics and its failures in economics Describing the collapse of the subprime mortgage CDO market in 2007 Derman urges us to stop the naive reliance on these models and offers suggestions for mending them This is a fascinating lyrical and very human look behind the curtain at the intersection between mathematics and human nature
