Algorithms in Java, Part 5 Robert Sedgewick, 2003-07-16 Once again Robert Sedgewick provides a current and comprehensive introduction to important algorithms The focus this time is on graph algorithms which are increasingly critical for a wide range of applications such as network connectivity circuit design scheduling transaction processing and resource allocation In this book Sedgewick offers the same successful blend of theory and practice that has made his work popular with programmers for many years Michael Schidlowsky and Sedgewick have developed concise new Java implementations that both express the methods in a natural and direct manner and also can be used in real applications

Algorithms in Java Third Edition Part 5 Graph Algorithms is the second book in Sedgewick's thoroughly revised and rewritten series The first book Parts 1-4 addresses fundamental algorithms data structures sorting and searching A forthcoming third book will focus on strings geometry and a range of advanced algorithms Each book's expanded coverage features new algorithms and implementations enhanced descriptions and diagrams and a wealth of new exercises for polishing skills The natural match between Java classes and abstract data type ADT implementations makes the code more broadly useful and relevant for the modern object oriented programming environment The Web site for this book

www.cs.princeton.edu/rs provides additional source code for programmers along with a variety of academic support materials for educators Coverage includes A complete overview of graph properties and types Diagraphs and DAGs Minimum spanning trees Shortest paths Network flows Diagrams sample Java code and detailed algorithm descriptions A landmark revision Algorithms in Java Third Edition Part 5 provides a complete tool set for programmers to implement debug and use graph algorithms across a wide range of computer applications
