The various chemical reactions occurring in our body occur within the specific pH of 7.0. Hence our body tries to maintain the normal pH level by eliminating the acidic products formed by different metabolic processes. Our body needs alkaline mineral salts to buffer or neutralize the acids formed in our body. So it is necessary to have an alkaline diet if you want to improve the health. Our body has the blood pH between 7.35 and 7.45. By eating alkaline foods we help our body to maintain this pH level. This does not mean that one has to avoid acidic foods completely. We have to keep a balance of acidic and alkaline food so that our body will be able to maintain the pH balance with less effort. The diet most of us have contains processed sugars, refined grains, artificial sweeteners, etc., causes the formation of acids in our body. When these foods are combined with psychological stress, lack of exercise, lack of sleep, results in various degenerative diseases.
