All Of Statistics Larry Solutions Manual:

All of Statistics Larry Wasserman, 2004-09-17 This book is for people who want to learn probability and statistics quickly. It brings together many of the main ideas in modern statistics in one place. The book is suitable for students and researchers in statistics, computer science, data mining, and machine learning. This book covers a much wider range of topics than a typical introductory text on mathematical statistics. It includes modern topics like nonparametric curve estimation, bootstrapping, and classification topics that are usually relegated to follow-up courses. The reader is assumed to know calculus and a little linear algebra. No previous knowledge of probability and statistics is required. The text can be used at the advanced undergraduate and graduate level. Larry Wasserman is Professor of Statistics at Carnegie Mellon University. He is also a member of the Center for Automated Learning and Discovery in the School of Computer Science. His research areas include nonparametric inference, asymptotic theory, causality, and applications to astrophysics, bioinformatics, and genetics. He is the 1999 winner of the Committee of Presidents of Statistical Societies Presidents Award and the 2002 winner of the Centre de recherches mathématiques de Montreal Statistical Society of Canada Prize in Statistics. He is Associate Editor of The Journal of the American Statistical Association and The Annals of Statistics. He is a fellow of the American Statistical Association and of the Institute of Mathematical Statistics.

A Concise Guide to Statistics Hans-Michael Kaltenbach, 2011-09-18 The text gives a concise introduction into fundamental concepts in statistics. Chapter 1: Short exposition of probability theory using generic examples. Chapter 2: Estimation in theory and practice using biologically motivated examples. Maximum likelihood estimation is covered, including Fisher information and power computations. Methods for calculating confidence intervals and robust alternatives to standard estimators are given. Chapter 3: Hypothesis testing with emphasis on concepts, particularly type I and type II errors, and interpreting test results. Several examples are provided. T tests are used throughout, followed by important other tests and robust nonparametric alternatives. Multiple testing is discussed in more depth, and combination of independent tests is explained. Chapter 4: Linear regression with computations solely based on R. Multiple group comparisons with ANOVA are covered together with linear contrasts, again using R for computations.
