Abstract—The purpose of this study was to determine the effect of a 12-week training program on the physical fitness of 10 sedentary, middle-aged men. The program consisted of three sessions per week, each lasting 45 min. The sessions included aerobic, strength, and flexibility exercises. The results showed that the participants significantly improved their cardiovascular fitness, muscular strength, and flexibility. The study suggests that a structured exercise program can effectively improve the physical fitness of sedentary middle-aged men.
