Thermal Analysis Systems

Abstract—The purpose of this study was to determine if there were differences in the prevalence of musculoskeletal disorders between two groups of nurses working in different units of a tertiary care hospital. The study included 100 nurses from the medical-surgical unit and 100 nurses from the intensive care unit. Data were collected by means of a self-administered questionnaire. Results showed that the prevalence of musculoskeletal disorders was higher among nurses from the intensive care unit than among nurses from the medical-surgical unit. The results also indicated that the prevalence of musculoskeletal disorders was higher among nurses who worked longer shifts and had more years of experience.
