7.0 Sight Adjustment - Windage

7.1 Windage adjustment is normally accomplished by using a bullet point to depress the screw and release the windage drum. Considering the aim point, environmental conditions and its possible direction by making sight adjustments, it is recommended that a 1/16" drift punch be utilized. Windage adjustments are made in one notch increments. Rotation of one notch in the direction of the "W" and the arrow will change the point of impact of the bullet one inch to the right at 100 yards (1 minute of angle). Reversing the rotation of the windage drum will cause the bullet to strike to the left the same amount.

8.0 Sight Adjustment - Elevation

- 8.1 Set the rear sight on normal range setting for distances of 0-500 yards. For distances of 500 to 500 yards, rotate rear sight to "L" (long range) position.
- 8.2 To adjust the sights for elevation, depress the front sight screw with a bullet point and rotate the sight post. Rotating the post clockwise as indicated by the arrow and word "up" will raise the point of impact, reversing the direction of rotation will lower the point of impact. Each detent notch rotated will change the point of impact 1 inch at 100 yards (1 minute of angle).
