All three components of the Revit platform are introduced in this textbook. This approach gives the reader a broad overview of the Building Information Modeling (BIM) process. The topics cover the design integration of most of the building disciplines: Architectural, Interior Design, Structural, Mechanical, Plumbing, and Electrical. Civil is not covered, but adding topography to your model is. Each book comes with a DVD containing numerous video presentations of the written material. Throughout the book, the student develops a two-story law office. The drawings start with the floor plans and develop all the way to photo-realistic renderings similar to the one on the cover of this book. Along the way, the building's structure, ductwork, plumbing, and electrical power and lighting are modeled. By the end, the reader will have thorough knowledge of many of the Revit basics needed to be productive in a classroom or office environment. Even if you will only be working with one component of Revit in your chosen profession, this book will give you important knowledge on how the other disciplines will be doing their work and valuable insight into the overall process. As an instructor, the author understands that many students in a classroom setting have varying degrees of computer experience. To help level the playing field, the first chapter is devoted to an introduction to computers. Much of the basics are covered from computer hardware and software to file management procedures, including step-by-step instructions on using a flash drive. Chapters 2 through 5 cover many of the Revit basics needed to successfully and efficiently work in the software. Once the fundamentals are covered, the remaining chapters walk the reader through a building project which is started from scratch, so nothing is taken for granted by the reader or the author.

The Aubin Academy Master Series AutoCAD MEP is a resource designed to shorten your learning curve, raise your comfort level, and most importantly, give you real-life tested practical advice on the usage of the software to create mechanical, electrical, and plumbing designs and calculations.
