Beyond the Atmosphere: Early Years of Space Science Homer Edward Newell, 1980 The Anatomical Exercises William Harvey, Geoffrey Keynes, 1995-01-01 Classic of science reports how Harvey's theory of the circulation of the blood came into being Reproduces the English translation made during Harvey's lifetime *Introduction to Abstract Harmonic Analysis* Lynn H. Loomis, 2013-05-09 Written by a prominent figure in the field of harmonic analysis this classic monograph is geared toward advanced undergraduates and graduate students and focuses on methods related to Gelfand's theory of Banach algebra 1953 edition Nonequilibrium Statistical Thermodynamics Bernard H. Lavenda, 2019-04-17 This book develops in detail the statistical foundations of nonequilibrium thermodynamics based on the mathematical theory of Brownian motion Author Bernard H Lavenda demonstrates that thermodynamic criteria emerge in the limit of small thermal fluctuations and in the Gaussian limit where means and modes of the distribution coincide His treatment assumes the theory of Brownian motion to be a general and practical model of irreversible processes that are inevitably influenced by random thermal fluctuations This unifying approach permits the extraction of widely applicable principles from the analysis of specific models Arranged by argument rather than theory the text is based on the premises that random thermal fluctuations play a decisive role in governing the evolution of nonequilibrium thermodynamic processes and that they can be viewed as a dynamic superposition of many random events Intended for nonmathematicians working in the areas of nonequilibrium thermodynamics and statistical mechanics this book will also be of interest to chemical physicists condensed matter physicists and readers in the area of nonlinear optics **Quantum Theory** David Bohm, 2012-04-25 This advanced undergraduate level text presents the quantum theory in terms of qualitative and imaginative concepts followed by specific applications worked out in mathematical detail *Selected Papers on Noise and Stochastic Processes* Nelson Wax, 1954-01-01 These six classic papers on stochastic process were selected to meet the needs of professionals and advanced undergraduates and graduate students in physics applied mathematics and engineering Contents include Stochastic Problems in Physics and Astronomy by S Chandrasekhar from Reviews of Modern Physics Vol 15 No 1 On the Theory of Brownian Motion by G E Uhlenbeck and L S Ornstein from Physical Review Vol 36 No 3 On the Theory of the Brownian Motion II by Ming Chen Wang and G E Uhlenbeck from Reviews of Modern Physics Vol 17 Nos 2 and 3 Mathematical Analysis of Random Noise by S O Rice from Bell System Technical Journal Vols 23 and 24 Random Walk and the Theory of Brownian Motion by Mark Kac from American Mathematical Monthly Vol 54 No 7 The Brownian Movement and Stochastic Equations by J L Doob from Annals of Mathematics Vol 43 No 2 The Theory of Spinors Élie Cartan, 2012-04-30 Describes orthogonal and related Lie groups using real or complex parameters and indefinite metrics Develops theory of spinors by giving a purely geometric definition of these mathematical entities **Non-Linear Elastic Deformations** R. W. Ogden, 2013-04-26 Classic in the field covers application of theory of finite elasticity to solution of boundary value problems

Equations of Mathematical Physics A. N. Tikhonov, A. A. Samarskii, 2013-09-16 Mathematical physics plays an important role in the study of many physical processes hydrodynamics elasticity and electrodynamics to name just a few Because of the enormous range and variety of problems dealt with by mathematical physics this thorough advanced undergraduate or graduate level text considers only those problems leading to partial differential equations Contents I Classification of Partial Differential Equations II Evaluations of the Hyperbolic Type III Equations of the Parabolic Type IV Equations of Elliptic Type V Wave Propagation in Space VI Heat Conduction in Space VII Equations of Elliptic Type Continuation The authors two well known Russian mathematicians have focused on typical physical processes and the principal types of equations dealing with them Special attention is paid throughout to mathematical formulation rigorous solutions and physical interpretation of the results obtained Carefully chosen problems designed to promote technical skills are contained in each chapter along with extremely useful appendixes that supply applications of solution methods described in the main text At the end of the book a helpful supplement discusses special functions including spherical and cylindrical functions
