

Radiation Oncology Practice Accreditation Program Requirements

Introduction

The radiation oncology practice accreditation program provides radiation oncologists with third party, impartial peer review and evaluation of patient care. The facility's personnel, equipment, treatment planning and treatment records, as well as patient safety policies, quality control/quality assessment activities are assessed. Recommendations for improvement are based on nationally recognized guidelines, including ACR and ASTRO guidelines and technical standards, ACR Appropriateness Criteria® and the American Association of Physics in Medicine (AAPM) Task Group reports.

The ACR Committee for Radiation Oncology Practice Accreditation directs the program. The accreditation process, designed to promote quality and be educational in nature, includes an on-site survey performed by board certified radiation oncologists and board certified medical physicists.

Application for Accreditation

Each facility applying for accreditation must submit an application through the secure website, <https://roga.acr.org>. The application consists of submission of facility treatment and equipment information, staffing levels and qualifications, and physics Quality Assurance/Quality Control documentation. If deficiencies are noted or missing items identified, the facility will be contacted so that any missing items can be submitted before the site survey is scheduled. When the application is complete, the date (s) of the survey will be confirmed. At this time, the facility will receive a notice to submit cases (Census Data Form) from which 10 (or more) will be selected for review during the site visit.
