Emilia Balas, Lakhmi C. Jain, Branko Kovačević, 2015-11-02 These volumes constitute the Proceedings of the 6th International Workshop on Soft Computing Applications or SOFA 2014 held on 24-26 July 2014 in Timisoara, Romania. This edition was organized by the University of Belgrade, Serbia, in conjunction with the Romanian Society of Control Engineering and Technical Informatics, SRAIT Arad Section, The General Association of Engineers in Romania, Arad Section, Institute of Computer Science, Iasi Branch of the Romanian Academy, and IEEE Romanian Section. The Soft Computing concept was introduced by Lotfi Zadeh in 1991 and serves to highlight the emergence of computing methodologies in which the accent is on exploiting the tolerance for imprecision and uncertainty to achieve tractability, robustness, and low solution cost. Soft computing facilitates the use of fuzzy logic, neurocomputing, evolutionary computing, and probabilistic computing in combination, leading to the concept of hybrid intelligent systems. The combination of such intelligent systems, tools, and a large number of applications introduce a need for a synergy of scientific and technological disciplines in order to show the great potential of Soft Computing in all domains. The conference papers included in these proceedings, published post-conference, were grouped into the following areas of research: Image, Text, and Signal Processing; Intelligent Transportation Modeling and Applications; Biomedical Applications; Neural Networks and Applications; Knowledge-Based Technologies for Web Applications; Cloud Computing; Security Algorithms and Computer Networks; Knowledge-Based Technologies; Soft Computing Techniques for Time Series Analysis; Soft Computing and Fuzzy Logic in Biometrics; Fuzzy Applications; Theory and Fuzzy Control; Business Process Management; Methods and Applications in Electrical Engineering. The volumes provide useful information to professors, researchers, and graduated students in the area of soft computing techniques and applications, as they report new research work on challenging issues.

Encyclopedia of Education, Economics, and Finance, Dominic J. Brewer, Lawrence O. Picus, 2014-08-25 Economics can be a lens for understanding the behavior of schools, districts, states, and nations in meeting education needs of their populations, as well as for understanding the individual decisions made by administrators, teachers, and students. Insights from economics help decision makers at the state level understand how to raise and distribute funds for public schools in an equitable manner for both schools and taxpayers. Economics also can assist researchers in analyzing effects of school spending and teacher compensation on student outcomes. And economics can provide important insights into public debates on issues such as whether to offer vouchers for subsidizing student attendance at private schools. This two-volume encyclopedia contains over 300 entries by experts in the field that cover these issues and more. Features: This work of 2 volumes in both print and electronic formats contains 300-350 signed entries by significant figures in the field. Entries conclude with cross references and suggestions for further readings to guide students to in-depth resources. Although organized in A to Z fashion, a thematic Reader's Guide in the front matter groups related entries by topic. Also in the front matter, a chronology provides students with historical perspective on the development of education, economics, and finance as a field of study. The entire work concludes with a Resources appendix and a comprehensive Index. In the electronic version

the index Reader's Guide and cross references combine to provide effective search and browse capabilities
