Analysis & Simulation of the Deep Sea Acoustic Channel for Sensor Networks Anuj Sehgal, 2013-11-22. Color Edition. In order to examine the practices used by underwater sensor networks for successful off shore deep sea deployments, this book analyzes the underwater channel acoustic propagation model and also looks briefly at the characteristics of the underwater transducers along with the unique effect that they pose upon sonar based communication systems. The book then goes on to exploring the state of the art in underwater sensor network design paradigms followed by an analysis of areas that warrant research. A discussion on simulating such networks and an analysis of the characteristics of the underwater acoustic channel is also carried out.

Sustainable Use and Development of Watersheds I. Ethem Gönenç, Angheluta Vadineanu, John P. Wolflin, Rosemarie C. Russo, 2008-07-15. John Wesley Powell, U.S. scientist and geographer put it best when he said that a watershed is that area of land, a bounded hydrologic system within which all living things are inextricably linked by their common water course and where, as humans settled, simple logic demanded that they become part of a community. Watersheds come in all shapes and sizes. They cross sectorial boundaries e.g. county, state, province and country. No matter where you are, you are in a watershed. World wide watersheds supply drinking water, provide recreation and respite and sustain life. Watersheds are rich in natural capital producing goods, agriculture and fisheries products and services, industry and technology for broad geographic areas. In many countries, at the base of watersheds where tributaries empty into large water bodies e.g. estuaries, seas, oceans are centers of society and are typically densely populated areas. These areas serve as concentrated centers of the socio economic system. They also are centers of domestic and international trade, tourism and commerce as well as the center of governments, capitals where local, regional and national legislatures are located. As we all live in a watershed, our individual actions can directly affect it. The cumulative effects of all the individual actions of everyone within a watershed may be and often are devastating to the quality of water resources and affect the health of living things including humans. Therefore, watershed systems are highly subject to threat to human security and peace.
