From the Preface The future of the world depends very much on how we manage natural resources Since the year 1900 there has been a ninefold increase in global carbon emissions from burning fossil fuels and the world population has increased about 3 7 times in this century Vast areas of forests have been destroyed and irrigated lands now produce 40% of the food supply Due to depletion of groundwater reserves and an increase in population irrigated area per capita is declining Consequently the irrigation of additional alluvial lands is a strategic necessity for all of humankind Much of the alluvial lands cannot be made productive without prior development of water resources through flood control drainage and irrigation The production of electricity through hydropower and the production of alcohol fuel from irrigated crops as has been practiced for many years in Brazil can slow the increase in carbon emissions Such diverse developments are typically not separable rather they must be considered as integral parts of a comprehensive development plan The conservation of natural resources and increasing productivity of irrigated lands are also strategic necessities Much of the current technology is highly transferable and crop yields can be significantly increased on lands already under irrigation The authors have worked in many countries in connection with resource inventories teaching and the planning development and use of irrigation as a tool for increasing production and providing employment They have written extensively and have been honored for their achievements They have considerable experience with everything from primitive low technology irrigation developments to highly developed irrigation in the USA and in dozens of countries around the world Both of the authors have dedicated their careers to teaching research and consulting in agricultural irrigation and water resources development and planning It is their hope and expectation that this book will provide incentives for investigating and documenting land and water resources improving development increasing crop yields conserving resources and improving the environment

consumers of water While it is very hard to regulate pollution from agriculture attempts have been made via economic and command and control instruments and also through investments in technologies and ecosystems recovery Coping with non point pollution takes the form of both policy intervention and technology development Likewise it is recognized that irrigation efficiency varies across countries influenced by both technology and supporting adoption policies Countries that lead in irrigation technology and supporting policies have certain traits in common They face very high scarcity and are pushed to find innovative solutions both technical and policy related The recent multibillion investments in irrigation technologies in Spain and similar proposals in Australia for example highlight the potential of irrigation technologies to cope with scarcity and water quality degradation This book reviews all of the above issues presents experiences in selected countries and assesses the degree of success of alternative policies for coping with non point water pollution and improving irrigation efficiency Irrigation & Drainage Ted Engman,1992 *Water Sustainability* Harry X.
