Environment and Livelihoods in Tropical Coastal Zones International Rice Research Institute,International Water Management Institute,2006-01-01 This book focuses on the challenges people face in managing agricultural crops aquaculture fisheries and related ecosystems in inland areas of coastal zones in the tropics of Asia Africa Australia and South America These challenges can create conflicts in the use of natural resources between different stakeholders Through many case studies the book discusses the nature of the conflicts and identifies what is known and not known about how to manage them For example some case studies relate to the trade offs between enhancing agricultural production by constructing embankments to keep out saline water and maintaining not only the variety of rural livelihoods but also brackish aquatic biodiversity Other case studies provide the lessons learnt from the conversion of mangrove forests to shrimp farms

Calcium: The molecular basis of calcium action in biology and medicine R. Pochet,Rosario Donato,J. Haiech,Claus W. Heizmann,Volker Gerke,2011-06-28 The enormous and varied role of calcium in living systems is now widely appreciated by both cell biologists and clinicians The identification and characterisation of new calcium binding proteins and regulatory pathways is matched by the recognition of the involvement of calcium binding proteins in a growing number of disease states This book is intended to introduce clinicians to fundamental biological research whilst at the same time attracting researchers to the clinical world The publication of the book coincides with the elucidation of the complete Human Genomic Sequence As a result of this scientists now have access to an unprecedented array of data from which new calcium binding proteins and hence new regulatory pathways will undoubtedly be discovered It is a further aim of this book to provide a key to open the door to the new postgenomic era The book is in three parts The first section introduces the reader to the role of calcium in cell biology providing an appreciation of how this small simple non metabolisable agent can move rapidly and silently through the different cellular compartments thereby influencing and controlling the fate of the cell This section also illustrates and dissects the often complex interplay between calcium and numerous agents in muscle and endocrine cells neurons hepatocytes and platelets In the second section the reader will discover the role of calcium and its partners in common diseases such as migraine and drug dependence New classes of diseases such as annexinopathies channelopathies calcium sensing disorders and citrullinemia are discussed and the authors give many new insights into the molecular mechanisms of the diseases thereby explaining how and why they occur Such information is clearly of primary importance for the pharmaceutical industry New ideas and concepts of neurodegenerative diseases are introduced which should stimulate new approaches Clinicians will also have access in a comprehensive and authoritative yet highly readable chapter to data

from recent large scale clinical studies on the numerous and widely prescribed calcium antagonists The final section gives information on new methods and devices for calcium imaging and illustrates how calcium movement and change can be monitored and ingeniously utilised as a fast cheap and accurate drug screening instrument **Soil Conservation** ,1954
