Federico Sanchez, 2010-06 Finally a book that explains suicide using the latest research in suicidology A must read for mental health professionals and the survivors of suicide who want to understand why suicide happens The material in this book should be incorporated into the curriculum of psychology and psychiatry because suicide is such a vital topic that is hardly covered in medical schools due to the lack of a coherent theory of the brain in general and suicide in particular This is an important book for all professionals who deal with mental disorders in general and suicide in particular It is the author's fifth book where suicide is explained not as a mysterious process but as a natural consequence of the reactions of the brain under certain conditions when suffering mental disorders The author begins with a brief summary of the statistics of the whos the hows and the wheres of suicide This gives us a clear idea of the magnitude of the problem of suicide of the cost not only in lives but of the emotional toll of the survivors as well as the financial burdens on society as a whole Then as an important first step to understanding the medical community's standard approaches to mental disease he reviews briefly the current psychiatric terminology and the diagnostic tools concerning mental disorders He presents the most accepted current theories and models of suicide He explains what a psychiatric emergency is and what to expect if one ever encounters such a situation And he explains how suicide risk assessment is currently done along with other important considerations He proceeds to explain in everyday language where possible his theory of how the brain works beginning with a simple explanation of how neurons communicate with each other Later he explains how the brain controls the body and how we see with the back of our heads how memory systems become a logical extension or expansion of our sensory and motor systems Awareness and attention are introduced first as an evolutionary tool that aids the senses gather more information from the environment and ultimately as tools that aid in thinking reasoning and constructing our past our lives and our identities But all this would mean nothing without the introduction of emotions and how the brain constructs contexts He explains how emotions are an integral part of memories and how these are related to contexts how basically the brain has created a very concise and compact filing memory system A clear explanation of how emotions are triggered regulated and dissipated is next These lead to a learned discussion of how these various systems can go haywire causing mental disorders A brief but perhaps new and revolutionary approach to these mental disorders is presented next including Obsessive Compulsive Disorder Delirium Dementia and Other Amnesic Disorders Manic Depression and Depression and Schizophrenia Ultimately it becomes clear how under certain conditions these disorders can lead to suicide The difference between attempters and completers is also explained He then presents a suicide autopsy as an exercise to show how varied the opinions of experts in the field of suicidology are and compares it to his own theories and lets the reader decide for himself who is closer to the truth The fallacy of many expert opinions of where research needs to go is presented The book gives a few words of advice on various therapies and the rationality of their approaches and cautions against their limitations The book devotes a chapter to suicide prevention in the military and how these efforts are bound to fail and another chapter on suicide prevention The author

makes important suggestions of how to prevent suicide and lessen suicide rates particularly among the young And lastly a chapter is devoted to the specifics of grief for suicide survivors

Patient Safety in Surgery Philip F. Stahel, Cyril Mauffrey, 2014-08-20 In general surgeons strive to achieve excellent results and ideal patient outcomes however this noble task is frequently failed For patients surgical complications are analogous to friendly fire in wartime Both scenarios imply that harm is unintentionally done by somebody whose aim was to help Interestingly adverse events resulting from surgical interventions are more frequently related to system errors and a communication breakdown among providers rather than to the imminent threat of the surgical blade gone wrong Patient Safety in Surgery aims to increase the safety and quality of care for patients undergoing surgical procedures in all fields of surgery Patient Safety in Surgery covers all aspects related to patient safety in surgery including pertinent issues of interest to surgeons medical trainees students residents and fellows nurses anaesthesiologists patients patient families advocacy groups and medicolegal experts
