[Introduction to Black Hole Physics](#) Valeri P. Frolov, Andrei Zelnikov, 2011-09-23 This book is about black holes one of the most intriguing objects of modern theoretical physics and astrophysics For many years black holes have been considered as interesting solutions of the Theory of General Relativity with a number of amusing mathematical properties Now after the discovery of astrophysical black holes the Einstein gravity has become an important tool for their study This self contained textbook combines physical mathematical and astrophysical aspects of black hole theory Pedagogically presented it contains standard material on black holes as well as relatively new subjects such as the role of hidden symmetries in black hole physics and black holes in spacetimes with large extra dimensions The book will appeal to students and young scientists interested in the theory of black holes

Differential Geometry and Mathematical Physics John K. Beem, Krishan L. Duggal, American Mathematical Society, Canadian Mathematical Society, 1994 This book contains the proceedings of the Special Session Geometric Methods in Mathematical Physics held at the joint AMS CMS meeting in Vancouver in August 1993 The papers collected here contain a number of new results in differential geometry and its applications to physics The major themes

include black holes singularities censorship the Einstein field equations geodesics index theory submanifolds CR structures and space time symmetries In addition there are papers on Yang Mills fields geometric techniques in control theory and equilibria Containing new results by established researchers in the field this book provides a look at developments in this exciting area of research

Life Cycle of Universe: Mother-Child Theory Jalendu V Shah, 2020-12-30 Centuries old expedition of mankind to comprehend nature universe based on reproducible mathematics and elevated science to evolve improved theories proving and un proving them endlessly leading to nowhere Mother Child Theory platforms Something to everything with deep insights to entire life cycle of universes expressing each interactions within and outside universe Logically position correction to energy equivalence as $E = mc^2$ condensation of light speed from supreme to zero gravity dependent light speed restraining black holes and their classification their Polar and Equatorial Galaxies and matter beyond event horizons interstate vary verses with Aether and Xir as universal fluid Gravity defined as balancing forces of Viscosity and Magnetism trajectory voyage of our universe in atmosphere of mother un limit science to get closest to the Ultimate Unified Theory Eradicating Big Bang theory the Mother Child Theory supremely enlighten the new era of modern science and definite direction to astrophysics

Introduction to the AdS/CFT Correspondence Horațiu Năstase, 2015-09-10

Providing a pedagogical introduction to the rapidly developing field of AdS CFT correspondence this is one of the first texts to provide an accessible introduction to all the necessary concepts needed to engage with the methods tools and applications of AdS CFT Without assuming anything beyond an introductory course in quantum field theory it begins by guiding the reader through the basic concepts of field theory and gauge theory general relativity supersymmetry supergravity string theory and conformal field theory before moving on to give a clear and rigorous account of AdS CFT correspondence The final section discusses the more specialised applications including QCD quark gluon plasma and condensed matter This book is self contained and learner focused featuring numerous exercises and examples It is essential reading for both students and researchers across the fields of particle nuclear and condensed matter physics

Gravitation in Astrophysics B.

Carter, J.B. Hartle, 2012-12-06 With the discovery of pulsars quasars and galactic X ray sources in the late 60 s and early 70 s and the coincident expansion in the search for gravitational waves relativistic gravity assumed an important place in the astrophysics of localized objects Only by pushing Einstein's solar system tested general theory of relativity to the study of the extremes of gravitational collapse and its outcomes did it seem that one could explain these frontier astronomical phenomena This conclusion continues to be true today Relativistic gravity had always played the central role in cosmology The discovery of the cosmic background radiation in 1965 the increasing understanding of matter physics at high energies in the decades following and the growing wealth of observations on the large scale structure meant that it was possible to make increasingly detailed models of the universe both today and far in the past This development not accidentally was contemporary to that for localized objects described above

Hawking on the Big Bang and Black Holes Stephen W. Hawking, 1993 Stephen

Hawking the Lucasian Professor of Mathematics at Cambridge University has made important theoretical contributions to gravitational theory and has played a major role in the development of cosmology and black hole physics Hawking's early work partly in collaboration with Roger Penrose showed the significance of spacetime singularities for the big bang and black holes His later work has been concerned with a deeper understanding of these two issues The work required extensive use of the two great intellectual achievements of the first half of the Twentieth Century general relativity and quantum mechanics and these are reflected in the reprinted articles Hawking's key contributions on black hole radiation and the no boundary condition on the origin of the universe are included The present compilation of Stephen Hawking's most important work also includes an introduction by him which guides the reader through the major highlights of the volume This volume is thus an essential item in any library and will be an important reference source for those interested in theoretical physics and applied mathematics It is an excellent thing to have so many of Professor Hawking's most important contributions to the theory of black holes and space time singularities all collected together in one handy volume I am very glad to have them Roger Penrose Oxford This was an excellent idea to put the best papers by Stephen Hawking together Even his papers written many years ago remain extremely useful for those who study classical and quantum gravity By watching the evolution of his ideas one can get a very clear picture of the development of quantum cosmology during the last quarter of this century Andrei Linde Stanford This review could have been quite short The book contains a selection of 21 of Stephen Hawking's most significant papers with an overview written by the author This work

Dreams of Other Worlds Chris Impey, Holly Henry, 2016-04-19 The story of unmanned space exploration from Viking to today *Dreams of Other Worlds* describes the unmanned space missions that have opened new windows on distant worlds Spanning four decades of dramatic advances in astronomy and planetary science this book tells the story of eleven iconic exploratory missions and how they have fundamentally transformed our scientific and cultural perspectives on the universe and our place in it The journey begins with the Viking and Mars Exploration Rover missions to Mars which paint a startling picture of a planet at the cusp of habitability It then moves into the realm of the gas giants with the Voyager probes and Cassini's ongoing exploration of the moons of Saturn The Stardust probe's dramatic round trip encounter with a comet is brought vividly to life as are the SOHO

and Hipparcos missions to study the Sun and Milky Way This stunningly illustrated book also explores how our view of the universe has been brought into sharp focus by NASA's great observatories Spitzer Chandra and Hubble and how the WMAP mission has provided rare glimpses of the dawn of creation Dreams of Other Worlds reveals how these unmanned exploratory missions have redefined what it means to be the temporary tenants of a small planet in a vast cosmos **Primordial**

Cosmology Patrick Peter, Jean-Philippe Uzan, 2013-02-14 This book provides an extensive survey of all the physics necessary to understand the current developments in the field of fundamental cosmology as well as an overview of the observational data and methods It will help students to get into research by providing definitions and main techniques and ideas discussed today The book is divided into three parts Part 1 summarises the fundamentals in theoretical physics needed in cosmology general relativity field theory particle physics Part 2 describes the standard model of cosmology and includes cosmological solutions of Einstein equations the hot big bang model cosmological perturbation theory cosmic microwave background anisotropies lensing and evidence for dark matter and inflation Part 3 describes extensions of this model and opens up current research in the field scalar tensor theories supersymmetry the cosmological constant problem and acceleration of the universe topology of the universe grand unification and baryogenesis topological defects and phase transitions string inspired cosmology including branes and the latest developments The book provides details of all derivations and leads the student up to the level of research articles
