SUPER AFR OVERVIEW

The HKS Super AFR is the very first airflow sensor computational device in the industry with a built-in CPU. The advantage of having a built-in CPU is that instead of making connections to the airflow meter voltage, the characterization of each airflow sensor is inputted at the CPU so it can calculate the accurate amount of air flowing in. Since this conversion will be made to this specific intake volume, the correction ratio of fuel will be perfect and proportionally correct. The Super AFR is compatible with most Import and Domestic 12V, 2-12 cylinder vehicles that utilize a hot wire, Karman Vortex, or pressure sensor. The internal CPU allows it to be versatile and be adjusted on many of the newer type airflow sensors. Also incorporated in the Super AFR is the ability of the air/fuel ratio controller to modification programs and require further specific tuning levels. The response function, similar to the one in the VPC, allows the adjustment to the fuel settings upon throttle inputs to improve drivability and performance. The ECU function is automatically programmed with the data from the actual self-learning calibration and automatically adjusted to correct mixture imbalances in relation from discharge valves upon deceleration.
