Bioreactors Goutam Saha,Alok Barua,Satyabroto Sinha,2017-12-01 Bioreactors Animal Cell Culture Control for Bioprocess Engineering presents the design fabrication and control of a new type of bioreactor meant especially for animal cell line culture The new bioreactor called the see saw bioreactor is ideal for the growth of cells with a sensitive membrane The see saw bioreactor derives its name from its principle of operation in which liquid columns in either limb of the reactor alternately go up and down The working volume of the reactor is small to within 15 L However it can easily be scaled up for large production in volume of cell mass in the drug and pharmaceutical industries The authors describe the principle of operation of the see saw bioreactor and how to automatically control the bioprocess They discuss different control strategies as well as the thorough experimental research they conducted on this prototype bioreactor in which they applied a time delay control for yield maximization To give you a complete understanding of the design and development of the see saw bioreactor the authors cover the mathematical model they use to describe the kinetics of fermentation the genetic algorithms used for deriving the optimal time trajectories of the bioprocess variables and the corresponding control inputs for maximizing the product yield One chapter is devoted to the application of time delay control Following a description of the bioreactor s working setup in the laboratory the authors sum up their investigation and define the future scope of work in terms of design control and software sensors **Animal Cell Culture** ,2000-06-29 This new edition of Animal Cell Culture covers new or updated chapters on cell authentication serum free culture apoptosis assays FISH genetic modification scale up stem cell assays 3 dimensional culture tissue engineering and cytotoxicity assays Detailed protocols for a wide variety of methods provide the core of each chapter making new methodology easily accessible Everyone working in biological and medical research whether in academia or a commercial organization practising cell culture will benefit greatly from this book

Animal Cell Culture Mell Carter &,2019-10-15 Cell culture refers to the removal of cells from an animal or plant and their subsequent growth in a favourable artificial environment The cells may be removed from the tissue directly and disaggregated by enzymatic or mechanical means before cultivation or they may be derived from a cell line or cell strain that has already been established Stem cells retain the capacity to self renew as well as to produce progeny with a restricted

mitotic potential and restricted range of distinct types of differentiated cell they give rise to The formation of blood cells also called haematopoiesis is the classical example of concept of stem cells Animal cell and tissue culture is an integral part of biotechnology and this book covers all the aspects of animal cell culture Animal cells are used for making new vaccines specific animal proteins such as interferons blood factors and hormones monoclonal antibodies for use as diagnostic and therapeutics gene probes as diagnostic too enzymes and last but not the least many new and important compounds This book contains eleven Chapters which deal with historic developments laboratory design sterilization procedures and various facets of animal cell culture This includes preservation characterizations storage and transport of cells their monitoring and technologies for cell banking
