effects of domestication on behaviour It unravels the mysteries of animal defences altruism social dominance territoriality and the finely tuned art of food and habitat selection Additionally it covers the biological mechanisms governing behaviour unearthing the roles played by neuroendocrinology biological clocks and genetics Towards the end the textbook examines the practical relevance of behavioural insights in veterinary science Key Features Offers a comprehensive exploration of animal behaviour encompassing a wide range of topics from evolutionary principles to intricate behavioural patterns Provides understanding of the origins of animal behaviour including the roles of evolution genetics and ecology Highlights the practical applications of behavioural insights in veterinary science and related fields Delves into specialized areas of animal behaviour such as innate behaviours animal memory pheromones and cooperation Explores how animals adapt to their environments covering topics like foraging behaviour predator detection and self defensive behaviours Addresses the impact of environmental factors hormones and drugs on behaviour offering a holistic view of animal responses to their surroundings

Ecological Physiology of Daily Torpor and Hibernation Fritz Geiser, 2021-08-23 This book provides an in depth overview on the functional ecology of daily torpor and hibernation in endothermic mammals and birds The reader is well introduced to the physiology and thermal energetics of endothermy and underlying different types of torpor Furthermore evolution of endothermy as well as reproduction and survival strategies of heterothermic animals in a changing environment are discussed Endothermic mammals and birds can use internal heat production fueled by ingested food to maintain a high body temperature As food in the wild is not always available many birds and mammals periodically abandon energetically costly homeothermic thermoregulation and enter an energy conserving state of torpor which is the topic of this book Daily torpor and hibernation multiday torpor in these heterothermic endotherms are the most effective means for energy conservation available to endotherms and are characterized by pronounced temporal and controlled reductions in body temperature energy expenditure water loss and other physiological functions Hibernators express multiday torpor predominately throughout winter which substantially enhances winter survival In contrast daily heterotherms use daily torpor lasting for several hours usually during the rest phase some throughout the year Although torpor is still widely considered to be a specific adaptation of a few cold climate species it is used by many animals from all climate zones including the tropics and is highly diverse with about 25 50% of all mammals but fewer birds estimated to use it While energy conservation during adverse conditions is an important function of torpor it is also employed to permit or facilitate energy demanding processes such as reproduction and growth especially when food supply is limited Even migrating birds enter torpor to conserve energy for the next stage of migration whereas bats may use it to deal with heat Even though many heterothermic species will be challenged by anthropogenic influences such as habitat destruction introduced species novel pathogens and specifically global warming not all are likely to be affected in the same way In fact it appears that opportunistic heterotherms because of their highly flexible energy requirements ability to limit foraging and reduce the risk of predation and often pronounced longevity may be better

equipped to deal with anthropogenic challenges than homeotherms In contrast strongly seasonal hibernators especially those restricted to mountain tops and those that have to deal with new diseases that are difficult to combat at low body temperatures are likely to be adversely affected This book addresses researchers and advanced students in Zoology Ecology and Veterinary Sciences *Handbook of Meat and Meat Processing* Y. H. Hui,2012-01-11 Retitled to reflect expansion of coverage from the first edition Handbook of Meat and Meat Processing Second Edition contains a complete update of materials and nearly twice the number of chapters Divided into seven parts the book covers the entire range of issues related to meat and meat processing from nutrients to techniques for preservati *Free Radicals and Diseases* Rizwan Ahmad,2016-10-26 The current volume entitled Free Radicals and Diseases integrates knowledge in free radical associated diseases from the basic level to the advanced level and from the bench side to bed side The chapters in this book provide an extensive overview of the topic including free radical formations and clinical interventions The Hidden Mechanics of Exercise Christopher M. Gillen,2014-03-17 The Hidden Mechanics of Exercise reveals the microworld of the body in motion from motor proteins that produce force to enzymes that extract energy from food and tackles questions athletes ask What should we ingest before and during a race How does a hard workout trigger changes in our muscles Why does exercise make us feel good Oxidative Stress and Hormesis in Evolutionary Ecology and Physiology David Costantini,2014-03-27 This book discusses oxidative stress and hormesis from the perspective of an evolutionary ecologist or physiologist In the first of ten chapters general historical information definitions and background of research on oxidative stress physiology hormesis and life history are provided Chapters 2 10 highlight the different solutions that organisms have evolved to cope with the oxidative threats posed by their environments and lifestyles The author illustrates how oxidative stress and hormesis have shaped diversity in organism life histories behavioral profiles morphological phenotypes and aging mechanisms The book offers fascinating insights into how organisms work and how they evolve to sustain their physiological functions under a vast array of environmental conditions
