Ageing Studies And Lifetime Extension Of Materials:

Ageing Studies and Lifetime Extension of Materials Les Mallinson, 2012-12-06 The first International Conference on Ageing Studies and Lifetime Extension of Materials was held on the July 12-14 1999 at St Catherine's College Oxford United Kingdom Over 230 delegates attended during the three days and heard nearly ninety papers together with over thirty poster presentations Sixteen of these papers were keynotes from invited speakers eminent in their field of research The proceedings were organised into six separate sessions observation and understanding of real time and accelerated ageing experimental techniques modelling and theoretical studies lifetime prediction and validation lifetime extension and material design for ageing In doing this it was hoped to cover most issues of scientific concern in the field of materials ageing One important aspect was that the conference did not concentrate on any particular group or type of material rather the aim was to attract contributions from workers engaged in ageing studies with as wide a range of materials as possible In this way it was hoped that delegates could interact with and learn from those whom they perhaps would not normally come across and that metallurgists could learn from polymer scientists ceramicists could talk to modellers and so on in this important field A read through the diverse papers contained within these proceedings will confirm that this aim was happily satisfied Why hold such a meeting In the modern world engineered systems are expected to last longer

Materials Ageing and Degradation in Light Water Reactors K L Murty, 2013-02-18 Light water reactors LWRs are the predominant class of nuclear power reactors in operation today however ageing and degradation can influence both their performance and lifetime Knowledge of these factors is therefore critical to safe continuous operation Materials ageing and degradation in light water reactors provides a comprehensive guide to prevalent deterioration mechanisms and the approaches used to handle their effects Part one introduces fundamental ageing issues and degradation mechanisms Beginning with an overview of ageing and degradation issues in LWRs the book goes on to discuss corrosion in pressurized water reactors and creep deformation of materials in LWRs Part two then considers materials ageing and degradation in specific LWR components Applications of zirconium alloys in LWRs are discussed along with the ageing of electric cables Materials management strategies for LWRs are then the focus of part three Materials management strategies for pressurized water reactors and VVER reactors are considered before the book concludes with a discussion of materials related problems faced by LWR operators and corresponding research needs With its distinguished editor and international team of expert contributors Materials ageing and degradation in light water reactors is an authoritative review for anyone requiring an understanding of the performance and durability of this type of nuclear power plant including plant operators and managers nuclear metallurgists governmental and regulatory safety bodies and researchers scientists and academics working in this area Introduces the fundamental ageing issues and degradation mechanisms associated with this class of nuclear power reactors Considers materials ageing and degradation in specific light water reactor components including properties performance and inspection Chapters also focus on material
