Systems Engineering Reinhard Haberfellner, Olivier de Weck, Ernst Fricke, Siegfried Vössner, 2019-06-06 This translation brings a landmark systems engineering SE book to English speaking audiences for the first time since its original publication in 1972 For decades the SE concept championed by this book has helped engineers solve a wide variety of issues by emphasizing a top down approach Moving from the general to the specific this SE concept has situated itself as uniquely appealing to both highly trained experts and anybody managing a complex project Until now this SE concept has only been available to German speakers By shedding the overtly technical approach adopted by many other SE methods this book can be used as a problem solving guide in a great variety of disciplines engineering and otherwise By segmenting the book into separate parts that build upon each other the SE concept's accessibility is reinforced The basic principles of SE problem solving and systems design are helpfully introduced in the first three parts Once the fundamentals are presented specific case studies are covered in the fourth part to display potential applications Then part five offers further suggestions on how to effectively practice SE

principles for example it not only points out frequent stumbling blocks but also the specific points at which they may appear In the final part a wealth of different methods and tools such as optimization techniques are given to help maximize the potential use of this SE concept Engineers and engineering students from all disciplines will find this book extremely helpful in solving complex problems Because of its practicable lessons in problem solving any professional facing a complex project will also find much to learn from this volume

Large Scale Optimization in Supply Chains and Smart Manufacturing

Jesús M. Velásquez-Bermúdez, Marzieh Khakifirooz, Mahdi Fathi, 2019-09-06 In this book theory of large scale optimization is introduced with case studies of real world problems and applications of structured mathematical modeling The large scale optimization methods are represented by various theories such as Benders decomposition logic based Benders decomposition Lagrangian relaxation Dantzig Wolfe decomposition multi tree decomposition Van Roy cross decomposition and parallel decomposition for mathematical programs such as mixed integer nonlinear programming and stochastic programming Case studies of large scale optimization in supply chain management smart manufacturing and Industry 4 0 are investigated with efficient implementation for real time solutions The features of case studies cover a wide range of fields including the Internet of things advanced transportation systems energy management supply chain networks service systems operations management risk management and financial and sales management Instructors graduate students researchers and practitioners would benefit from this book finding the applicability of large scale optimization in asynchronous parallel optimization real time distributed network and optimizing the knowledge based expert system for convex and non convex problems
