Automated Manual Gearbox:

Advanced Transmission Systems: Dual-Clutch, Automated Manual & Hybrid Gearboxes Mohammed Hamed Ahmed Soliman, 2025-09-27 Advanced automotive transmissions are no longer a niche topic they are at the heart of modern vehicle design performance and efficiency While many resources focus on traditional gearboxes or CVTs very few provide a comprehensive hands on guide covering the full spectrum of transmission technologies beyond CVT wet and dry dual clutch transmissions DCTs automated manual transmissions AMTs traditional automatics Tiptronic manual shift systems and hybrid electric drivetrains This book builds on the foundation laid in my previous work Mastering CVT Transmissions which focused exclusively on continuously variable transmissions their maintenance troubleshooting and optimization While the CVT book provided in depth guidance for one critical technology this new volume expands the coverage to all other advanced transmissions offering readers a truly comprehensive understanding of modern vehicle drivetrains By combining theoretical knowledge with practical real world experience this book offers Clear explanations of how each transmission type works and why it behaves the way it does Maintenance and troubleshooting guidance for longevity and reliability Performance optimization strategies including shift mapping torque management and hybrid electric considerations Case studies and practical examples drawn from racing tuning and professional workshops Whether you are a professional mechanic automotive engineer tuning enthusiast or student this book equips you with the knowledge to understand diagnose maintain and optimize every major advanced transmission system By bridging the gap between theory and hands on practice it prepares you for the demands of modern vehicles and the rapidly evolving automotive landscape Simply put this book is designed to make complex transmission systems accessible understandable and usable helping you confidently tackle challenges that most resources leave unaddressed and serving as the perfect complement to the insights shared in Mastering CVT Transmissions Author Note My own experiences shaped the series tuning my personal vehicles since 1998 competing in formal Egyptian autocross races from 2001 to 2003 and running my YouTube channel CarTuningLovers where I share practical tips and tutorials with a global community of car enthusiasts These experiences combined with my academic background in mechanical and industrial engineering gave me both the hands on insight and technical expertise to craft guides that are practical accurate and actionable

Automotive Transmissions Harald Naunheimer, Bernd Bertsche, Joachim Ryborz, Wolfgang Novak, 2010-11-09 This book gives a full account of the development process for automotive transmissions Main topics Overview of the traffic vehicle transmission system Mediating the power flow in vehicles Selecting the ratios Vehicle transmission systems basic design principles Typical designs of vehicle transmissions Layout and design of important components e g gearshifting mechanisms moving off elements pumps retarders Transmission control units Product development process Manufacturing technology of vehicle transmissions Reliability and testing The book covers manual automated manual and automatic transmissions as well as continuously variable transmissions and hybrid drives for

passenger cars and commercial vehicles Furthermore final drives power take offs and transfer gearboxes for 4 WD vehicles are considered Since the release of the first edition in 1999 there have been a lot of changes in the field of vehicles and transmissions About 40% of the second edition s content is new or revised with new data Gear Change Selection and Clutch Control of an Automated Manual Transmission Vehicle Enric Canal García,2011 The aim of this report is to provide a detailed overview of Automated Manual Transmissions AMT from its control point of view An introduction about AMT is given stating its main advantages in terms of cost and efficiency compared to other transmission types and justifying the context which makes AMT an interesting system for investigation It is stated as well its importance for the Ford Focus prototype vehicle where the project will carry the investigation This leads to the aim and objectives Then previous research about AMT is summarized Starting with the common problems of AMT some proposed control strategies follow which aim to solve the discussed problems As well AMTs actuator control strategies are presented All this analysis led to some recommendations which guide the next steps of the project Continuing with the vehicle is introduced with major emphasis on the AMT system It is explained the present components and new drivers that are designed and built which provide the functionality needed for the AMT Next the controller architecture development process is discussed Starting from the low level controllers for each of the AMT actuators it is explained the strategy used to achieve the control of them It includes an interesting discussion on how to use the sensors present on the actuators to achieve position control without position feedback Then it follows the details on how each actuator is integrated in high level controllers until achieving the complete control of the AMT successfully Finally some conclusions are drawn stating the importance of the feedback sensors for gearbox controllers and the clutch control concerns Guidance is as well given for further investigation on the AMT system of the prototype vehicle Keywords Gearshift Gearbox Actuators Gearbox Control Clutch Control Shift Shock Shift Time Vehicle Start Simulink Stateflow Synchromesh dSpace *Model-based calibration of automated transmissions* Huang, Hua,2016-11-18 With continuous restrictions on emission standards and demands for higher driving comfort the calibration of shift quality is linked deeply and widely to automated transmission control algorithms This calibration process is typically implemented with real vehicles on the road under poorly reproducible conditions where the calibration engineer has no other choice but to try different control parameters till the subjective assessment on the shift quality meets certain requirements such as shifting comfort or sportiness Compared with today s multiplying number of variants in vehicle engine transmission combinations and exponential growth of control parameters this traditional method is backward and costly An efficient way to rise to the challenge is the model based automatic calibration In contrast to the conventional shift quality calibration this novel method uses a closed loop approach based on a dynamic model instead of human know how A shift quality correlated position trajectory is proposed Compared to the traditional control parameter adjustment method the guided trajectory has a higher tolerance to the system s hardware components and a better compatibility with TCUs from diverse suppliers Since shift

quality is not restricted to a general summarized grade e.g. comfort and sportiness are always two conflicting influence factors in the terms of shift quality calibrations a multi objective evolutionary algorithm is applied to search the set of Pareto optimal front which includes all the optimal compromised control parameters of the gear shifting trajectory for possible choice In this work a hydro mechanical AMT synchronization system is used as an example to explain the proposed optimization process A Modelica based non linear hydro mechanical AMT system is modeled which describes the transient behavior during gear shifting in detail An effective fuzzy sliding mode position controller is designed for the referenced position tracking during synchronization in contrast to the conventional trial and error tuning method a genetic algorithm is applied to automatically identify and optimize the sliding mode controller parameters A novel multi objective evolutionary algorithm MLIA is developed to find out the optimal control set for the synchronization trajectories Verification at a transmission test bench shows that this model based multi objective optimization method has a guiding capability in automated transmission calibration

Mit deutlich strengeren gesetzlichen Anforderungen hinsichtlich der Abgasemissionen und einer zunehmend anspruchsvolleren Nachfrage bezüglich des Fahrkomforts rückt die Frage nach der Schaltqualität stärker in den Fokus der Getriebeentwicklung Die Kalibrierung umgangssprachlich die Applikation ist deshalb ein Schwerpunkt bei der Entwicklung von Algorithmen für die Schaltqualität von automatisierten Getriebesteuerungen Der Kalibrierungsprozess wird in der Regel im Fahrzeugversuch auf der Straße durchgeführt Der Applikationsingenieur versucht unter diesen nicht reproduzierbaren Bedingungen verschiedene Steuerparameter zu adaptieren Dies wird für eine Schaltung solange durchgeführt bis die subjektive Beurteilung der Schaltqualität und die zugehörigen Eigenschaften wie zum Beispiel Schaltkomfort und Sportlichkeit erfüllt ist Dieser beschriebene Prozess ist zeit und personalaufwendig was mit dem aktuellen Angebot an Motor Getriebe Fahrzeugvarianten kaum bewältigt werden kann Als weitere Herausforderung steigt die Anzahl der kalibrierbaren Parameter der Regler und Steuerungsmethoden stetig um die Kundenbedürfnisse zu befriedigen weshalb auch aus Kostensicht ein besserer Prozess gefunden werden muss Eine effiziente Möglichkeit zur Lösung der skizzierten Problemstellungen ist die modellbasierte automatische Kalibrierung Im Gegensatz zu der herkömmlich auf Fahrversuche basierende Kalibrierung der Schaltqualität verwendet dieses neue Verfahren ein dynamisches Modell in einer geschlossenen Schleife Anstelle des Applikationsingenieurs für die Fahrvorgaben wird in der Schleife ein Fahrerregler und ein Optimierungsalgorithmus verwendet um so eine hohe Reproduzierbarkeit des Schaltereignisses sicherzustellen Es wird vorgeschlagen die Bewegung der Schaltstellung zu optimieren da diese mit der Schaltqualität korreliert Diametral steht dem die allgemein übliche Regleranpassung verschiedener Parameter für die Synchronisation gegenüber Die vorgeschlagene Methode der geführten Schaltbewegung weist eine deutlich höhere Toleranz gegenüber der Varianz an Hardwarekomponenten und damit eine bessere Kompatibilität zu den Getriebesteuergeräten TCUs verschiedener Lieferanten auf Die Schaltqualität lässt sich nicht auf ein subjektives Kriterium zusammenfassen es werden immer unterschiedliche Faktoren wie z.B. Komfort

und Sportlichkeit den Schaltvorgang bestimmen. Deshalb wird für die Optimierung des Schaltvorgangs eine mehrkriterieller evolutionärer Algorithmus angewandt, um die Paretofront zu identifizieren, was alle Kompromisse der Schaltbewegungsregelung einschließt. Es wird ein Modell eines hydromechanischen Synchronisationssystems für ein automatisiertes Getriebe als Beispielanwendung benutzt, um den vorgeschlagenen Optimierungsprozess zu demonstrieren. Das nichtlineare hydromechanische Synchronisationssystem wird mit der objektorientierten Sprache Modelica modelliert. Mit dem Modell werden Schaltvorgänge detailliert beschrieben. Ein Fuzzy Sliding Mode Regler wird für die jeweilige Bewegung der Schaltung während der Synchronisation benutzt. Im Gegensatz zur herkömmlichen empirischen Anpassung der Reglerparameter wird ein genetischer Algorithmus angewendet, um die automatische Erkennung und Bewertung der Parameter vom Fuzzy Sliding Mode Regler zu optimieren. Ein neuartiger evolutionärer mehrkriterieller Algorithmus MLIA wurde angewandt, um eine optimale Bewegung der Schaltstellung während der Synchronisierung zu finden. Die Validierung am Getriebeprüfstand zeigt, dass diese modellbasierte Methode der mehrkriteriellen Optimierung in der automatisierten Getriebekalibrierung eine deutliche Verbesserung darstellt.
