Ansys Theoretical Manual:

Computational Methods in Nonlinear Structural and Solid Mechanics Ahmed K. Noor, Harvey G. McComb, 2014-05-20

Computational Methods in Nonlinear Structural and Solid Mechanics covers the proceedings of the Symposium on Computational Methods in Nonlinear Structural and Solid Mechanics. The book covers the development of efficient discretization approaches, advanced numerical methods, improved programming techniques, and applications of these developments to nonlinear analysis of structures and solids. The chapters of the text are organized into 10 parts according to the issue they tackle. The first part deals with nonlinear mathematical theories and formulation aspects, while the second part covers computational strategies for nonlinear programs. Part 3 deals with time integration and numerical solution of nonlinear algebraic equations, while Part 4 discusses material characterization and nonlinear fracture mechanics, and Part 5 tackles nonlinear interaction problems. The sixth part discusses seismic response and nonlinear analysis of concrete structure, and the seventh part tackles nonlinear problems for nuclear reactors. Part 8 covers crash dynamics and impact problems, while Part 9 deals with nonlinear problems of fibrous composites and advanced nonlinear applications. The last part discusses computerized symbolic manipulation and nonlinear analysis software systems. The book will be of great interest to numerical analysts, computer scientists, structural engineers, and other professionals concerned with nonlinear structural and solid mechanics.

Modelling in Medicine and Biology VIII C. A. Brebbia, 2009. Featuring contributions from the eighth International Conference on Modelling in Medicine and Biology, this volume covers a broad spectrum of topics, including the application of computers to simulate biomedical phenomena. It will be of interest to medical and physical scientists and engineers.

Modelling in Medicine and Biology C. A. Brebbia, 2011. The idea of preparing this volume originated from the ever-increasing importance of computational modelling of complex problems in medicine. Considerable advances have been made in this area, as demonstrated by the continued success of the International Conference on Modelling in Medicine and Biology, organised by the Wessex Institute of Technology. The work reported at those meetings and the research carried out at the Wessex Institute of Technology indicated the increasing interaction and collaboration between medical and engineering scientists. Advances presented at these conferences are now being used in practice for a wide range of medical and surgical applications. The considerable improvements and evolution of the field has led to some of the best scientists who have participated in our conferences to write an article on their most recent research. This has led to thirteen outstanding articles published in this volume, which encompass important areas of biomedical modelling.
