Ansys 14 Manual Welding Simulation:

Finite Element Analysis of Weld Thermal Cycles Using ANSYS G. Ravichandran, 2020-08-02 Finite Element Analysis of Weld Thermal Cycles Using ANSYS aims at educating a young researcher on the transient analysis of welding thermal cycles using ANSYS. It essentially deals with the methods of calculation of the arc heat in a welded component when the analysis is simplified into either a cross sectional analysis or an in plane analysis. The book covers five different cases involving different welding processes, component geometry, size of the element, and dissimilar material properties. A detailed step by step calculation is presented followed by APDL program listing and output charts from ANSYS. Features: Provides useful background information on welding processes, thermal cycles, and finite element method. Presents calculation procedure for determining the arc heat input in a cross sectional analysis and an in plane analysis. Enables visualization of the arc heat in a FEM model for various positions of the arc. Discusses analysis of advanced cases like dissimilar welding and circumferential welding. Includes step by step procedure for running the analysis with typical input APDL program listing and output charts from ANSYS.

Minimization of Welding Distortion and Buckling Pan Michaleris, 2011-05-25 Welding is a cost effective and flexible method of fabricating large structures but drawbacks such as residual stress, distortion, and buckling must be overcome in order to optimize structural performance. Minimization of welding distortion and buckling provides a systematic overview of the methods of minimizing distortion and buckling in welded structures. Following an introductory chapter, part one focuses on understanding welding stress and distortion with chapters on such topics as computational welding mechanics, modelling the effect of phase transformations on welding stress and distortion, and using computationally efficient reduced solution methods to understand welding distortion. Part two covers different methods of minimizing welding distortion. Chapters discuss methods such as differential heating for minimizing distortion in welded stiffeners, dynamic thermal tensioning, reverse side heating, and ways of minimizing buckling such as weld cooling and hybrid laser arc welding. With its distinguished editor and international team of contributors, Minimization of welding distortion and buckling is an essential reference for all welders and engineers involved in fabrication of metal end products as well as those in industry and academia with a research interest in the area. Provides a systematic overview of the methods of minimizing distortion and buckling in welded structures. Focuses on understanding welding stress and distortion featuring computational welding mechanics and modelling the effect of phase transformations. Explores different methods of minimizing welding distortion, discussing differential heating and dynamic thermal tensioning.
