

Second year tree management

Quickly fill their allotted spaces

During the second year, the trees will fill their allotted spaces on the trellis.

Mark a few leads if you want to create more branches on the leader.

Trim the branches and side shoots of the top half of the leader and the trees in the rows. Remove any shoots growing inside the 'V' and where the limbs are tight and are too strong.

Do not bend the leader.

At the end of the season you have more open, bushier trees. The tops have continued to grow as follows with the roots and do not need pruning or water.

The best way to control these two regions and control optimum production is:

- To produce primary year young trees as soon as is possible, and

- Only bend the trees as late as possible when they have reached a height of 10% of the width of the rows. Do this to avoid any one shading. For example, if the rows from tree to tree (across the row) are 4.5 m wide (see [last page 12](#)), the height of the tree canopy at season should be 0.45 m, measured vertically.

- Crop your trees according to their size and region. As a guide, a ton of sustainable yields for high density apple orchards in Australia is [here](#) (page 17).

Depending on region, your trees may be able to produce an average of 20 apples per tree (2.0 kg). However, if you happened to have planted small trees, the heavily managed to keep good better branches you must remove all that to encourage good growth in the second year.

After two years in the orchard, your trees have filled their spaces on the trellis. The bottom half of the trees have opened up and some gaps have also developed along the leaders. The pollinator trees are also larger in their spaces. Only one side of the pollinator trees is shown.

Second year tree management (cont)

These Cherry Creek trees on ADO208 produced 15 kg of fruit 12 months after the trees were planted.
