Endometriosis: Updates on the Etiology, Pathophysiology,

Measurements and Therapeutics Qi Xiaorong,Xiao Liang ,Lan Zheng,2025-09-08 Endometriosis is a chronic inflammation and multisystem disease whose aetiology remains unclear Globally approximately 10% of reproductive age females suffer from symptoms of chronic pelvic pain and infertility caused by ectopic endometrium The pathogenesis and underlying mechanisms of endometriosis involve endometrial tissue or cell reflux into the pelvis during menstruation endometrial stem cell implantation maladaptive inflammatory responses and multiple signalling pathways etc Because of the differences observed among endometriosis entities the pathophysiology behind endometriosis development remains unclear Effective long term management of endometriosis is still unsatisfying because of relapse and complications although endometriosis can be treated by hormone therapeutics analgesics and surgery In depth insights into cellular and molecular events would

facilitate the development of therapeutic methods to keep endometriosis under control and delay disease progression Moreover non invasive diagnostic biomarkers and imaging measures are urgently needed to detect the extent of endometriosis and assess its efficacy Thus it is crucial to deepen the mechanism research and determine whether these factors can be therapeutically targeted in endometriosis **Ultrasound in Infertility and Gynecology** Sonal
