The Heston Model and its Extensions in Matlab and C# Fabrice D. Rouah, 2013-08-01 Tap into the power of the most popular stochastic volatility model for pricing equity derivatives Since its introduction in 1993 the Heston model has become a popular model for pricing equity derivatives and the most popular stochastic volatility model in financial engineering This vital resource provides a thorough derivation of the original model and includes the most important extensions and refinements that have allowed the model to produce option prices that are more accurate and volatility surfaces that better reflect market conditions The book's material is drawn from research papers and many of the models covered and the computer codes are unavailable from other sources The book is light on theory and instead highlights the implementation of the models All of the models found here have been coded in Matlab and C This reliable resource offers an understanding of how the original model was derived from Riccati equations and shows how to implement implied and local volatility Fourier methods applied to the model numerical integration schemes parameter estimation simulation schemes American options the Heston model with time dependent parameters finite difference methods for the Heston PDE the Greeks and the double Heston model A groundbreaking book dedicated to the exploration of the Heston model a popular model for pricing equity derivatives Includes a companion

This section gives a description of notions used throughout this study Current achievements in developing action centered ontologies are also discussed

2.1 Ontologies

In the context of information extraction and retrieval different kinds of ontologies can be distinguished

15 Top level ontologies

describe very general concepts like space and time not depending on a particular domain Domain ontologies and task ontologies describe the vocabulary related to a generic domain or kind of task detailing the terms used in the top level ontology Application ontologies describe the concepts that depend on the particular domain and task within a specific activity Several investigations have been conducted to bring actions tasks to bear on tologies Among them are Chandrasekaran et al 6 and Mizoguchi et al 23 in the fields of AI and Knowledge Engineering For the geospatial domain Kuhn 21 and Raubal and Kuhn 26 have attempted to support human actions in ontologies for transportation Acknowledging the importance of human actions in the geographic domain a research workshop was held in 2002 bringing together experts from different disciplines to share the knowledge and work on this issue

1 Camara 5

one of the workshop participants has proposed that action driven spatial ontologies are formed via category theory for the case of emergency action plans
