Directions in Development : Africa's Power Infrastructure : Investment, Integration, Efficiency Anton A. Eberhard,2011 Africa's Power Infrastructure Orvika Rosnes,Maria Shkaratan,2011 Africa s Power Infrastructure Investment Integration Efficiency is based on the most extensive data collection exercise ever undertaken on infrastructure in Africa the Africa Country Infrastructure Country Diagnostic AICD Data from this study have provided new insights on the extent of a power crisis in the region characterized by insufficient capacity low electricity connection rates high costs and poor reliability and on what can be done about it The continent faces an annual power sector financing gap of about 21 billion with much of the existing spending channeled to maintain and operate high cost power systems leaving little for the huge investments needed to provide a long term solution Meanwhile the power crisis is taking a heavy toll on economic growth and productivity This book asserts that the current impediments to economic growth and development need to be tackled through policies and investment strategies that renew efforts to reform state owned utilities build on the lessons of private participation in infrastructure projects retarget electrification strategies expand regional power trade and mobilize new funding resources Further development of regional power trade would allow Africa to harness larger scale and more cost effective energy sources reducing energy system costs by US 2 billion and carbon dioxide emissions by 70 million tons annually But reaping the promise of regional trade depends on a handful of major exporting countries raising the large volumes of finance needed to develop generation capacity for export it also requires a large number of importing countries to muster the requisite political will With increased utility efficiency and regional power trade in play power costs would fall and full cost recovery tariffs could become affordable in much of Africa This will make utilities more creditworthy and help sustain the flow of external finance to the sector which is essential to close the huge financing gap **Energy Transitions and the Future of the African Energy Sector** Victoria R. Nalule,2020-10-12 This book explores current developments in the African energy sector and highlights how these are likely to be affected by the ongoing global efforts to transition to a low carbon economy It analyses the legal regulatory and policy frameworks at the national and regional level as they relate to Energy transition in Africa and discusses how regionalism is increasingly utilized to tackle energy access and climate change challenges Using case studies from across the continent several key thematic issues including gender justice social license to operate local content and conflict of energy laws are covered in detail The authors also uniquely examine the progressive nature of global energy use and introduce the new concept of Energy Progression This book will be an invaluable reference for researchers and policymakers looking for a comprehensive overview of the field **Ending Africa's Energy Deficit and the Law** Yinka Omorogbe,Ada Ordor,2018-02-09 With the inclusion of access to energy in the sustainable development goals the role of energy to human existence was finally recognized Yet in Africa this achievement is far from realized Omorogbe and Ordor bring together experts in their fields to ask what is stalling progress examining problems from

institutions catering to vested interests at the continent's expense to a need to develop vigorous financial and fiscal frameworks. The ramifications and complications of energy law are labyrinthine; this volume discusses how energy deficits can burden disabled people, women and children in excess of their more fortunate counterparts as well as considering environmental issues including the delicate balance between the necessity of water for drinking and cleaning and the use of water in industrial processes. A pivotal work of scholarship, the book poses pressing questions for energy law and international human rights.

Routledge Handbook of Southeast Asian Development Andrew McGregor, Lisa Law, Fiona Miller, 2017-11-06 Southeast Asia is one of the most diverse regions in the world, hosting a wide range of languages, ethnicities, religions, economies, ecosystems and political systems. Amidst this diversity, however, has been a common desire to develop. This provides a unifying theme across landscapes of difference. This Handbook traces the uneven experiences that have accompanied development in Southeast Asia. The region is often considered to be a development success story; however, it is increasingly recognized that growth underpinning this development has been accompanied by patterns of inequality, violence, environmental degradation and cultural loss. In 30 chapters written by established and emerging experts of the region, the Handbook examines development encounters through four thematic sections: Approaching Southeast Asian development, Institutions and economies of development, People and development, and Environment and development. The authors draw from national or sub-national case studies to consider regional-scale processes of development, tracing the uneven distribution of costs, risks and benefits. Core themes include the ongoing neoliberalization of development, issues of social and environmental justice and questions of agency and empowerment. This important reference work provides rich insights into the diverse impacts of current patterns of development and, in doing so, raises questions and challenges for realizing more equitable alternatives. It will be of value to students and scholars of Asian Studies, Development Studies, Human Geography, Political Ecology and Asian Politics.

Le potentiel transformateur de l'industrie minière en Afrique Sudeshna Ghosh Banerjee, Zayra Romo, Gary McMahon, Perrine Toledano, Peter Robinson, Inés Pérez Arroyo, 2015-02-17 Africa needs power: power to enhance the welfare of its people and expand its economies. But Sub-Saharan Africa's power sector has the lowest generation capacity in the world. Two-thirds of the regional population remains without electricity, and even those with access consume the least among the world's regions. Businesses say unreliable electricity is a major hurdle. Meanwhile, vast energy resources remain untapped. One possible solution is to leverage the mining industry's substantial need for power as an anchor for energy infrastructure development. *The Power of the Mine: A Transformative Opportunity for Sub-Saharan Africa* is the first study to systematically analyze both the potential and the challenges of power mining integration. The findings show that industry demand for electricity can be a game changer. Mining operations often devote a quarter or more of operating costs to electricity. This consistent high-volume demand can spur development of national power systems, thus expanding electrification for the populace. As a result, citizens can also benefit from safe

adequate access to electricity Countries benefit from larger exports and tax revenues more business and job opportunities and higher GDP Utilities benefit from having creditworthy mining partners as a core source of revenue that attracts investment And mines benefit from the significant cost reductions a stable power grid provides The Power of the Mine will be of interest to policymakers researchers and business analysts engaged in energy infrastructure development Handbook on Electricity Markets Glachant, Jean-Michel, Joskow, Paul L., Pollitt, Michael G., 2021-11-12 With twenty two chapters written by leading international experts this volume represents the most detailed and comprehensive Handbook on electricity markets ever published *The Power of the Mine* Sudeshna Ghosh Banerjee, Zayra Romo, Gary McMahon, Perrine Toledano, Peter Robinson, Inés Pérez Arroyo, 2014-12-09 The mining industry could play a key role in Africa's energy sector since it requires power in large quantity and reliable quality to run its processes The integration of mining with power system development with appropriate risk mitigation mechanisms could bring a win win solution to utilities mines and people at large *From the Bottom Up* Bernard Tenenbaum, Chris Greacen, Tilak Siyambalapitiya, James Knuckles, 2014-01-23 This report describes the four basic types of on and off grid small power producers emerging in Africa and highlights the regulatory and policy questions that must be answered by electricity regulators rural energy agencies and ministries to promote commercially sustainable investments by private operators and community organizations **Shedding Light on Electricity Utilities in the Middle East and North Africa** Daniel Camos, Robert Bacon, Antonio Estache, Mohamad Mahgoub Hamid, 2017-12-04 The electricity sector in the Middle East and North Africa MENA is in the grip of an apparent paradox The region holds the world's largest oil and gas reserves and has been able to universalize access to electricity in most economies but it may not be able to make the investments required to meet the future power needs of its fast growing populations The annual investments to keep pace with the demand for electricity have been estimated at about 3 percent of the region's projected GDP In most of the region's economies however financial constraints limit the ability to make those investments The power sector needs to find its own financing sources and quickly *Shedding Light on Electricity Utilities in the Middle East and North Africa* provides quantitative evidence on how better utility management sustainable pricing and selective context specific reforms would free enough resources to make the needed investments and lower the operating costs of the sector The solution involves cutting costs and raising revenues through well targeted and well identified improvements These improvements would generate more financing than the sector's investment needs The report provides detailed evidence of the size of the potential gain in each of the 14 MENA economies covered The analysis is based on the MENA Electricity Database a new dataset covering 67 electricity utilities as well as a sample of utilities in comparable economies from other regions The authors hope that their benchmarking efforts will provide a regional and utility level frame of reference for sector performance in the region The book will be of interest to managers of electricity utilities regulators policy makers and other stakeholders concerned with the performance of utilities in the region
