is merely a language of expression The complexity of learning DAX is not the formula or the functions It is how to use it in real world scenarios and how it performs on a dataset or visual I have been writing many blogs about DAX for many years My blog articles are all coming from my experience working with Power BI I found it helpful to compile them all in a book Because my blog articles practically explain things I thought it better to title it as a practical way of learning DAX by examples Indeed there are books articles and Microsoft documentation on how each function works where and how However learning these through an example would bring a new way of understanding it A good analytics solution is a combined outcome of a good data model good data preparation and good analytics and calculations I have written another book about the Basics of modeling in Power BI This book is covering the calculation and DAX aspects of it This book is for you if you are building a Power BI solution Even if you are just visualizing the data calculations are an essential part of analytics You do need to have the calculation ready before visualizing it This is not a book to explain every single function in DAX The approach in this book is to have practical examples Every chapter is based on real world examples of using a combination of functions to solve a challenge You can start from any chapter and finish at any chapter The order of chapters suggested in this book is just a guideline to help you have a smooth flow of topics Each chapter can be read without needing other chapters Examples of this book are designed in a way that you can use the learning straight away in your Power BI file
