Oxford Textbook of Anaesthesia for the Elderly Patient Christopher Dodds, Chandra Kumar, Bernadette Veering, 2014-03-27 As the global population lives to an increasing older age, there is a need to research, develop and deliver appropriate anaesthesia and pain management care to these increasingly frail and vulnerable patients. This book provides a comprehensive and detailed overview of all aspects of anaesthesia for the elderly patient, looking at the effect of ageing on the systems of the body and the role that age has on drug mechanisms. Designed for both consultants and trainees who care for elderly patients, chapters address the clinical management of the older patient in pain, trauma, intensive care, as well as anaesthesia for all aspects of surgery. The expert author team use their experience to provide a practical and stimulating book which informs everyday clinical activity and explores the unanswered questions which face anaesthetists in this changing patient population.
