

Biology Exam 1 Study Guide

Lecture 1 → Introduction to Biological Science

Tree of Life

- Domains
 - Eukarya → visible life
 - Split into animals and plants
 - Very small portion
 - Bacteria → single cell
 - Make up most of life's branches
 - Symbionts that evolved into mitochondria and chloroplasts were eubacteria
 - Archaea → original domain of life
 - More closely related to eukaryotes than eubacteria, first branch of life
 - Basic split between archaea and bacteria
- Candidate phyla radiation: Single species have been identified, each identifies an entire phylum which is yet to be understood - pioneer species (tree is dominated by new species that scientists have never seen before)
- Species disappearing faster than can be recovered
- Eukaryotes and archaea are most closely related branches

Destruction and Mass Extinction

- One million species face imminent extinction because of humans
- Recent past → >50% vertebrates/>75% flying insects lost in the past <50 years
- Critically threatened → >40% amphibians, >30% plants/corals/sharks, >25% mammals
- Populations and extinctions have increased

Theory of Evolution

- Evolution: all life on earth evolved from a common ancestor, most properties within cells work in the same way, the change in gene distribution over time within a population
- Theory: a very well substantiated idea that explains many overlapping phenomena at once, wide-ranging, strongest. Not a hypothesis
- Darwin: species arise through random mutation and natural selection for fitness
- Evidence (fewer than 40% of Americans believe in evolution)
 - fossil record shows conservation of homologous structures
 - Molecular proof: same DNA and RNA protein in cells
 - Homologous function in hands and fins → evolved similar mechanisms in appendages
- Scopes Monkey Trial
 - Scopes taught evolution illegally; resulted in Butler Act → forbid teaching evolution in TN
- Endosymbiont theory
 - Single composite cell of greater complexity could evolve from two or more separate simpler living cells in a symbiotic relationship

Year of Earth's History

- 1 Jan: earth formed 4.54 bya by acceleration of material from the solar nebula via gravitational collapse, conditions were incompatible with life, bombarded with asteroid-sized meteors for 800 million years
- 4 Mar: by 3.8 bya bombardment had slowed, Earth had cooled to lower the temps "compatible" with life

Dragonfly Nymphs of North America Kenneth J. Tennessen, 2019-03-11

This monograph is the first of its kind devoted entirely to the dragonfly nymphs of North America north of Mexico the focus being accurate identification of the 330 species of Anisoptera that occur in the region

Nymphal external morphology is described and illustrated in detail and all terms needed to navigate the dichotomous keys are defined

Species are tabulated with references that provide the most detailed accurate descriptions for each species that are inadequately described are so indicated

The key separating the seven families in the region contains several new characters

The families are then covered separately

Aeshnidae 13 genera Gomphidae 17 genera Petaluridae 2 genera Cordulegastridae 2 genera Macromiidae 2 genera Corduliidae 7 genera and Libellulidae 29 genera

Each family is further characterized followed by a generic key

A drawing of the habitus and diagnostic details for each genus are provided along with additional diagnostic remarks and notes on habitat and life cycle for each genus

a map shows its geographic distribution in North America

Full grown nymphs of all known species of each genus are keyed and diagnosed characters that apply to earlier instars are noted

Morphological variation in character states was analyzed in order

to assess the reliability of previously utilized characters and to discover new characters Most of the characters used to distinguish all levels of taxa are illustrated a total of 702 figures comprising 1 800 original drawings along with selected photographs where necessary for clarity accompany the keys Measurements of total length head width and other variables for each species are provided in tables Difficulties with past keys and descriptions including errors omissions and other shortcomings are addressed The importance of nymph characters in helping solve generic and specific distinctions and their role in phylogenetic studies is emphasized Methods for collecting rearing and preserving dragonfly nymphs and exuviae are presented The final chapter discusses research opportunities on North American Anisoptera nymphs including taxonomic needs studies on structure and function life history and microhabitat water quality indices and conservation efforts The habitus drawings of all genera are arranged according to family in five plates Appendix I although the book is intended as a lab manual these plates conveniently allow for comparison based on nymph shape making field identification to genus possible in many cases Appendix II contains a brief history of dragonfly nymph studies in North America A glossary and an index to scientific names are included
