Progress in Thermochemical Biomass Conversion A. V. Bridgwater, 2008-04-30 This book is for chemical engineers fuel technologists agricultural engineers and chemists in the world wide energy industry and in academic research and government institutions It provides a thorough review of and entry to the primary and review literature surrounding the subject The authors are internationally recognised experts in their field and combine to provide both commercial relevance and academic rigour Contributions are based on papers delivered to the Fifth International Conference sponsored by the IEA Bioenergy Agreement

Thermochemical Conversion Processes for Solid Fuels and Renewable Energies Falah Alobaid, Jochen Ströhle, 2021-08-30 It is widely believed that a large proportion of greenhouse gas emissions originated anthropogenically from the use of fossil fuels with additional contributions coming from manufactured materials deforestation soil erosion and agriculture including livestock The global society actively supports measures to create a flexible and low carbon energy economy to attenuate climate change and its devastating environmental consequences In this Special Issue the recent advancements in the next generation thermochemical conversion processes for solid fuels and renewable energies e g the operational flexibility of co combustion of biomass and lignite integrated solar combined cycle power plants and advanced gasification systems such as the sorption enhanced gasification and the chemical looping gasification were shown

Advances in Thermochemical Biomass Conversion A.V. Bridgwater, 2013-04-17 This book provides an account of the state of the art in thermochemical biomass conversion and arises from the third conference in a series sponsored by the International Energy Agency s Bioenergy Agreement Fundamental and applied research topics are included reflecting recent advances as well as demonstration and commercial innovation

Progressive Thermochemical Biorefining Technologies Sonil Nanda, Dai-Viet N. Vo, 2021-09-01 Considering the deleterious impacts of fossil fuels on the environmental and natural ecosystems it has become imperative to make a paradigm shift toward renewable fuels chemicals and materials The exhaustive everyday usage of fossil fuels and processed petrochemical products are the leading causes for the increase in greenhouse gas emissions global warming climate changes acid rain ozone layer depletion pollution of air water and soil as well as for the accumulation of nonbiodegradable materials in the soil and oceans On the contrary biofuels biochemicals and biomaterials derived from renewable wastes such as nonedible plant biomass e g agricultural and forestry biomass energy crops microalgae municipal solid waste sewage sludge and other biogenic residues seem to be carbon neutral Therefore the global interest in biorefining technologies especially thermochemical and biological conversion

processes is gaining momentum in academic and industrial perspectives Progressive Thermochemical Biorefining Technologies offers all inclusive coverage of the most crucial topics as follows State of the art information on the production and utilization of biofuels through thermochemical biorefining technologies Conversion of waste biomass through pyrolysis liquefaction torrefaction carbonization gasification reforming and other clean technologies Waste to energy chemical generation Fuel upgrading technologies Techno economic analysis and life cycle assessment of biorefining processes Specifically designed to be instantly applicable this volume serves as a reference book for undergraduate and graduate students scientific investigators and research scholars working in the areas relating to energy and fuels Waste to Profit Meera Sheriffa Begum K.M.,Anand Ramanathan,Amaro Olimpio Pereira Junior,Dmitrii O. Glushkov,M. Angkayarkan Vinayakaservi,2023-06-19 Waste to Profit Environmental Concerns and Sustainable Development gives information about selecting the most suitable technology for waste treatment and energy recovery under different conditions It contains techno economic analysis life cycle assessment optimization of tools and technologies including overview of various technologies involved in the treatment of wastes and factors influencing the involved processes Finally it explores the environmental socioeconomic and sustainability impact of different waste to energy systems Features Reviews energy sources and technologies from waste their environmental interactions and the relevant global energy policies Provides overview of waste to energy technologies for a sustainable future Explores physicochemical properties involved in the pertinent process and technologies Gives a multidisciplinary view about energy conversion and management planning controlling and monitoring processes Discusses information in transferring the technologies industrial level and global level to meet the requirements of different countries This book is aimed at researchers and graduate students in environmental engineering energy engineering waste management waste to energy and bioenergy Integration of Clean and Sustainable Energy Resources and Storage in Multi-Generation Systems Farkhondeh Jabari,Behnam Mohammadi-Ivatloo,Mousa Mohammadpourfard,2020-07-09 This book presents design principles performance assessment and robust optimization of different poly generation systems using renewable energy sources and storage technologies Uncertainties associated with demands or the intermittent nature of renewables are considered in decision making processes Economic and environmental benefits of these systems in comparison with traditional fossil fuels based ones are also provided Case studies numerical results discussions and concluding remarks have been presented for each proposed system strategy This book is a useful tool for students researchers and engineers trying to design and evaluate different zero energy and zero emission stand alone grids Solar Energy Update ,1984 **Next-Generation Greenhouses for Food Security** Redmond R. Shamshiri,2021-06-16 Modern greenhouse technology has revolutionized the food supply chain scenario over the past 40 years Closed field cultivation by means of agri cubes plant factories vertical farming structures and roof top solar greenhouses has become the backbone of sustainable agriculture for producing all year round fresh fruits and vegetables

This book is an attempt to explore several profound questions such as how digital technology and simulation models have saved energy in commercial greenhouses and why growers prefer LPWAN sensors and IoT monitoring devices over the traditional timer based controllers How artificial intelligence is capable of performing microclimate prediction and control and what considerations should be taken into account for implementing desiccant evaporative cooling systems With case study examples and field experiments each chapter highlights some of the most recent solutions and adaptation strategies toward improving the efficiency and sustainability of closed field crop production systems
