Biosensors Recent Advances And Mathematical Challenges:

Biosensors: Recent advances and mathematical challenges Johann F. Osma, Margarita Stoytcheva, 2014-03-04 Many researchers and research groups around the globe are dealing with interdisciplinary problems and multidisciplinary groups but especially those that deal everyday with biosensors have the feeling of not having enough personnel with the sufficient background to cover all topics With this feeling in our minds we decided to invite wonderful researchers from different parts to design this book not as a conventional biosensors book but as an interesting journey in the complex world of biosensors A close look to some recent and key advances on the topic but at the same time tips through novel mathematical modelling to improve our work and last but not least tricks to fool those undesired electrical disturbances that commonly messes our daily work can be found in these pages Feel free to navigate the book through its chapters once in your hands you will feel eager to learn more about biosensors It has been an experience to put all this together but now with the book ready we can say that this trip has being a wonderful adventure That is why want to thank all the authors for their great contributions the Editorial and Irene for their constant input and to you the reader for being part of this book
