Brain-Computer Interfaces Aboul Ella Hassanien,Ahmad Taher Azar,2014-11-01 The success of a BCI system depends as much on the system itself as on the user's ability to produce distinctive EEG activity BCI systems can be divided into two groups according to the placement of the electrodes used to detect and measure neurons firing in the brain These groups are invasive systems electrodes are inserted directly into the cortex are used for single cell or multi unit recording and electrocorticography EcoG electrodes are placed on the surface of the cortex or dura noninvasive systems they are placed on the scalp and use electroencephalography EEG or magnetoencephalography MEG to detect neuron activity The book is basically divided into three parts The first part of the book covers the basic concepts and overviews of Brain Computer Interface The second part describes new theoretical developments of BCI systems The third part covers views on real applications of BCI systems

Handbook of Research on Applied Cybernetics and Systems Science Saha, Snehanshu,Mandal, Abhyuday,Narasimhamurthy, Anand,V, Sarasvathi,Sangam, Shivappa,2017-04-17 In the digital era novel applications and techniques in the realm of computer science are increasing constantly These innovations have led to new techniques and developments in the field of cybernetics The Handbook of Research on Applied Cybernetics and Systems Science is an authoritative reference publication for the latest scholarly information on complex concepts of more adaptive and self regulating systems Featuring exhaustive coverage on a variety of topics such as infectious disease modeling clinical imaging and computational modeling this publication is an ideal source for researchers and students in the field of computer science seeking emerging trends in computer science and computational mathematics

Proceedings of the International Conference on Advanced Intelligent Systems and Informatics 2016 Aboul Ella Hassanien,Khaled Shaalan,Tarek Gaber,Ahmad Taher Azar,M. F. Tolba,2016-10-20 This book gathers the proceedings of the 2nd International Conference on Advanced Intelligent Systems and Informatics AISI2016 which took place in Cairo Egypt during October 24 26 2016 This international interdisciplinary conference which highlighted essential research and developments in the field of informatics and intelligent systems was organized by the Scientific Research Group in Egypt SRGE and sponsored by the IEEE Computational Intelligence Society Egypt chapter and the IEEE Robotics and Automation Society Egypt Chapter The book's content is divided into four main sections Intelligent Language Processing Intelligent Systems Intelligent Robotics Systems and Informatics

Brain Art Anton Nijholt,2019-05-25 This is the first book on brain computer interfaces BCI that aims to explain how these BCI interfaces can be used for artistic goals Devices that measure changes in brain activity in various regions of our brain are available and they make it possible to investigate how brain activity is related to experiencing and creating art Brain activity can also be monitored in order to find out about the affective state of a performer or bystander and use this knowledge to create or adapt an interactive multi sensorial audio visual tactile piece of art Making use of the measured affective state is just one of the possible ways to use BCI for artistic expression We can also stimulate brain activity

It can be evoked externally by exposing our brain to external events whether they are visual auditory or tactile Knowing about the stimuli and the effect on the brain makes it possible to translate such external stimuli to decisions and commands that help to design implement or adapt an artistic performance or interactive installation Stimulating brain activity can also be done internally Brain activity can be voluntarily manipulated and changes can be translated into computer commands to realize an artistic vision The chapters in this book have been written by researchers in human computer interaction brain computer interaction neuroscience psychology and social sciences often in cooperation with artists using BCI in their work It is the perfect book for those seeking to learn about brain computer interfaces used for artistic applications Handbook of Research on Modeling, Analysis, and Control of Complex Systems Azar, Ahmad Taher, Kamal, Nashwa Ahmad, 2020-12-05 The current literature on dynamic systems is quite comprehensive and system theory's mathematical jargon can remain quite complicated Thus there is a need for a compendium of accessible research that involves the broad range of fields that dynamic systems can cover including engineering life sciences and the environment and which can connect researchers in these fields The Handbook of Research on Modeling Analysis and Control of Complex Systems is a comprehensive reference book that describes the recent developments in a wide range of areas including the modeling analysis and control of dynamic systems as well as explores related applications The book acts as a forum for researchers seeking to understand the latest theory findings and software problem experiments Covering topics that include chaotic maps predictive modeling random bit generation and software bug prediction this book is ideal for professionals academicians researchers and students in the fields of electrical engineering computer science control engineering robotics power systems and biomedical engineering

Future of AI, IoT, and Sustainability Brojo Kishore Mishra, Alvaro Rocha, 2025-09-26 In an era where technological advancements are reshaping industries and societies the convergence of Artificial Intelligence AI the Internet of Things IoT and Sustainability initiatives is driving unprecedented change Future of AI IoT and Sustainability explores the transformative power of these technologies and their role in creating a more sustainable efficient and interconnected world This insightful volume brings together leading experts and thought leaders to examine the latest innovations at the intersection of AI IoT and Sustainability Through a series of compelling chapters readers will discover how AI and IoT are revolutionizing industries such as energy agriculture transportation and urban development offering new solutions to the pressing challenges of climate change resource management and environmental preservation Whether you are a technologist policy maker researcher or sustainability advocate this book provides a comprehensive guide to understanding the future landscape of AI IoT and sustainability It offers practical insights and forward thinking strategies that will inspire and equip you to contribute to a greener smarter and more sustainable future **Emotion and Stress Recognition Related Sensors and Machine Learning Technologies** Kyandoghere Kyamakya, Fadi Al-Machot, Ahmad Haj Mosa, Hamid Bouchachia, Jean Chamberlain Chedjou, Antoine Bagula, 2021-09-01 This book includes impactful chapters which present scientific concepts

frameworks architectures and ideas on sensing technologies and machine learning techniques These are relevant in tackling the following challenges i the field readiness and use of intrusive sensor systems and devices for capturing biosignals including EEG sensor systems ECG sensor systems and electrodermal activity sensor systems ii the quality assessment and management of sensor data iii data preprocessing noise filtering and calibration concepts for biosignals iv the field readiness and use of nonintrusive sensor technologies including visual sensors acoustic sensors vibration sensors and piezoelectric sensors v emotion recognition using mobile phones and smartwatches vi body area sensor networks for emotion and stress studies vii the use of experimental datasets in emotion recognition including dataset generation principles and concepts quality insurance and emotion elicitation material and concepts viii machine learning techniques for robust emotion recognition including graphical models neural network methods deep learning methods statistical learning and multivariate empirical mode decomposition ix subject independent emotion and stress recognition concepts and systems including facial expression based systems speech based systems EEG based systems ECG based systems electrodermal activity based systems multimodal recognition systems and sensor fusion concepts and x emotion and stress estimation and forecasting from a nonlinear dynamical system perspective This book emerging from the Special Issue of the Sensors journal on Emotion and Stress Recognition Related Sensors and Machine Learning Technologies emerges as a result of the crucial need for massive deployment of intelligent sociotechnical systems Such technologies are being applied in assistive systems in different domains and parts of the world to address challenges that could not be addressed without the advances made in these technologies

Neuroergonomics Hasan Ayaz, Frederic Dehais, 2018-11-21 Neuroergonomics The Brain at Work and in Everyday Life details the methodologies that are useful for keeping an ideal human machine system up to date along with information on how to prevent potential overload and minimize errors It discusses neural measures and the proper methods and technologies to maximize performance thus providing a resource for neuroscientists who want to learn more about the technologies and real time tools that can help them assess cognitive and motivational states of human operators and close the loop for advanced human machine interaction With the advent of new and improved tools that allow monitoring of brain activity in the field and better identification of neurophysiological markers that can index impending overload or fatigue this book is a timely resource on the topic Includes neurobiological models to better understand risky decision making and cognitive countermeasures augmented cognition and brain stimulations to enhance performance and mitigate human error Features innovative methodologies and protocols using psychophysiological measurements and brain imaging techniques in realistic operational settings Discusses numerous topics including cognitive performance in psychological and neurological disorders brain computer interfaces BCI and human performance monitoring in ecological conditions virtual reality and serious gaming

[Progress in Advanced Computing and Intelligent Engineering](#) Khalid Saeed, Nabendu Chaki, Bibudhendu Pati, Sambit Bakshi, Durga Prasad Mohapatra, 2017-12-21 The book focuses on both theory and applications in the broad areas

of communication technology computer science and information security This two volume book contains the Proceedings of International Conference on Advanced Computing and Intelligent Engineering These volumes bring together academic scientists professors research scholars and students to share and disseminate information on knowledge and scientific research works related to computing networking and informatics to discuss the practical challenges encountered and the solutions adopted The book also promotes translation of basic research into applied investigation and convert applied investigation into practice Recent Advances in Intelligent Assistive Technologies: Paradigms and Applications Hariton Costin,Björn Schuller,Adina Magda Florea,2019-11-07 This book illustrates the rapid pace of development in intelligent assistive technology in recent years and highlights some salient examples of using modern IT C technologies to provide devices systems and application software for persons with certain motor or cognitive disabilities The book proposes both theoretical and practical approaches to intelligent assistive and emergent technologies used in healthcare for the elderly and patients with chronic diseases Intelligent assistive technology IAT is currently being introduced and developed worldwide as an important tool for maintaining independence and high quality of life among community living people with certain disabilities and as a key enabler for the aging population The book offers a valuable resource for students at technical medical and general universities but also for specialists working in various fields in which emergent technologies are being used to help people enjoy optimal quality of life
