- This software has evolved from a simple calculator to all rounder software for all subjects. It consists of the following basics.

- **Command Window:**

In this window one must type and immediately execute the statements, as it requires quick prototyping. These statements cannot be saved. Thus, this is can be used for small, easily executable programs.

- **Editor (Script):**

In this window one can execute larger programs with multiple statements, and complex functions These can be saved and are done with the file extension '.m '

- **Workspace:**

In this window the values of the variables that are created in the course of the program (in the editor) are displayed.
