Classical and Nonclassical Logics Eric Schechter, 2020-10-06 So called classical logic the logic developed in the early twentieth century by Gottlob Frege Bertrand Russell and others is computationally the simplest of the major logics and it is adequate for the needs of most mathematicians But it is just one of the many kinds of reasoning in everyday thought Consequently when presented by itself as in most introductory texts on logic it seems arbitrary and unnatural to students new to the subject In *Classical and Nonclassical Logics* Eric Schechter introduces classical logic alongside constructive relevant comparative and other nonclassical logics Such logics have been investigated for decades in research journals and advanced books but this is the first textbook to make this subject accessible to beginners While presenting an assortment of logics separately it also conveys the deeper ideas such as derivations and soundness that apply to all logics The book leads up to proofs of the Disjunction Property of constructive logic and completeness for several logics The book begins with brief introductions to informal set theory and general topology and avoids advanced algebra thus it is self contained and suitable for readers with little background in mathematics It is intended primarily for undergraduate students with no previous experience of formal logic but advanced students as well as researchers will also profit from this book **Studyguide for an Introduction to Non-Classical Logic** Cram101 Textbook Reviews, 2013-05 Never

Alasdair Urquhart on Nonclassical and Algebraic Logic and Complexity of Proofs Ivo Düntsch, Edwin Mares, 2021-09-24 This book is dedicated to the work of Alasdair Urquhart The book starts out with an introduction to and an overview of Urquhart's work and an autobiographical essay by Urquhart This introductory section is followed by papers on algebraic logic and lattice theory papers on the complexity of proofs and papers on philosophical logic and history of logic The final section of the book contains a response to the papers by Urquhart Alasdair Urquhart has made extremely important contributions to a variety of fields in logic He produced some of the earliest work on the semantics of relevant logic He provided the undecidability of the logics R of relevant implication and E of relevant entailment as well as some of their close neighbors He proved that interpolation fails in some of those systems Urquhart has done very important work in complexity theory both about the complexity of proofs in classical and some nonclassical logics In pure algebra he has produced a representation theorem for lattices and some rather beautiful duality theorems In addition he has done important work in the history of logic especially on Bertrand Russell including editing Volume four of Russell's Collected Papers
