

Neurotoxin

High Quality Content by WIKIPEDIA articles! A neurotoxin is a toxin that acts specifically on nerve cells (neurons), usually by interacting with membrane proteins such as ion channels. Some sources are more general, and define the effect of neurotoxins as occurring at nerve tissue. Bungarotoxin, which is considered a neurotoxin, has its effect at the motor end plate. Many of the venoms and other toxins that organisms use in defense against vertebrates are neurotoxins. A common effect is paralysis, which sets in very rapidly. The venom of bees, scorpions, pufferfish, spiders and snakes can contain many different toxins.

A Structural Basis For Clostridial Neurotoxin Target Specificity:

A Structural Basis for Clostridial Neurotoxin Target Specificity Mark A. Breidenbach, 2005 **Clostridial Neurotoxins**
Cesare Montecucco, 2013-11-11 Tetanus has been known from the very beginning of medical literature since it was first described by Hippocrates of Cos in the fifth century B C For 24 centuries it was considered a neurological disease until the breakthrough of CARLE and RATIONE 1884 who demonstrated its infectious etiology Following the establishment of purified cultures of *Clostridium tetani* KITASATO 1889 FABER 1890 and TIZZONI and CATIANI 1890 demonstrated that the disease is actually an intoxication caused by a proteic neurotoxin This toxin was shown by BRUSHCHETIINI 1892 to move retroaxonally and to act at the spinal cord level Soon thereafter VAN ERMINGEN 1897 demonstrated that botulism is also due to intoxication with a protein toxin produced by bacteria of the genus *Clostridium* These bacteria and their spores are ubiquitous and the majority of them do not produce neurotoxins The selective advantage of producing such potent toxin is still a matter of speculation see Popoff this volume The next major advance was the discovery that tetanus neurotoxin 1 can be converted by formaldehyde treatment to a nonpathogenic but still fully immunogenic form and that this can be used successfully as a vaccine to prevent tetanus RAMON and DESCOMBEY 1925 Similar vaccines toxoids can be prepared with botulinum neurotoxins see MIDDLEBROOK and BROWN this volume The prevention of tetanus by vaccination see Galatzka and Gasse this volume is one of the great successes of basic research coupled with an efficient public medicine service

Dissertation Abstracts International, 2005 *The Comprehensive Sourcebook of Bacterial Protein Toxins* Joseph E. Alouf, Daniel Ladant, Michel R. Popoff, 2015-05-29 The Comprehensive Sourcebook of Bacterial Protein Toxins Fourth Edition contains chapters written by internationally known and well respected specialists This book contains chapters devoted to individual toxins as well as chapters that consider the different applications of these toxins Considerable progress has been made in understanding the structure function interaction and trafficking into cells as well as mechanism of action of toxins Bacterial toxins are involved in the pathogenesis of many bacteria some of which are responsible for severe diseases in human and animals but can also be used as tools in cell biology to dissect cellular processes or used as therapeutic agents Novel recombinant toxins are already proposed in the treatment of some diseases as well as new vaccines Alternatively certain toxins are also considered as biological weapons or bioterrorism threats Given the multifaceted aspects of toxin research and the multidisciplinary approaches adopted toxins are of great interest in many scientific areas from microbiology virology cell biology to biochemistry and protein structure This new edition is written with a multidisciplinary audience in mind and contains 5 new chapters that reflect the latest research in this area Other chapters have been combined deleted and fully revised as necessary to deliver relevant and valuable content Descriptions of relevant toxins as well as representative toxins of the main bacterial toxin families to allow for a better comparison between them Focused chapters on toxin applications and common properties or general features of toxins *Annual Commencement* Stanford University, 2004

Botulinum and Tetanus Neurotoxins B.R. DasGupta, 2013-11-11 Three days in Madison have thoroughly modified my view on clostridial neurotoxins While still realizing the numerous activating modifying and protective inputs I cannot judge the meaningfulness of the meeting impartially Neither may the reader expect a complete summary of all presentations Collected in this volume they speak for themselves without requiring an arbiter Instead I shall write down my very personal opinions as a researcher who has studied clostridial neurotoxins for nearly 25 years Comparable conferences have been rare during this time A comprehensive symposium 4 on C botulinum neurotoxins has been organized at Ft Detrick International conferences on tetanus have been held regularly under the auspices of the World Health Organization One or maximally two days of these meetings have been devoted to tetanus toxin and its actions whereas the sponsor and the majority of the participants have been interested mainly in epidemiology prevention and treatment of tetanus as a disease see refs 5 6 Some aspects of clostridial neurotoxins have been addressed in the context of bacterial toxins in particular in the biennial European workshops 1 3 7 8 The Madison meeting differed from the previous ones in three aspects First it covered both tetanus and botulinum neurotoxins The fusion was justified because of their huge similarities in primary structure in their mode of action and in their cellular targets Second the meeting was not limited to toxins but drew some lines on which modern neurobiology might proceed

This book delves into A Structural Basis For Clostridial Neurotoxin Target Specificity. A Structural Basis For Clostridial Neurotoxin Target Specificity is a crucial topic that needs to be grasped by everyone, ranging from students and scholars to the general public. The book will furnish comprehensive and in-depth insights into A Structural Basis For Clostridial Neurotoxin Target Specificity, encompassing both the fundamentals and more intricate discussions.
