A Theory of Universals: Volume 2 D. M. Armstrong, David Malet Armstrong, 1978 This is a study in two volumes of one of the longest standing philosophical problems the problem of universals In volume I David Armstrong surveys and criticizes the main approaches and solutions to the problems that have been canvassed rejecting the various forms of nominalism and Platonic realism In volume II he develops an important theory of his own an objective theory of universals based not on linguistic conventions but on the actual and potential findings of natural science He thus reconciles a realism about qualities and relations with an empiricist epistemology The theory allows too for a convincing explanation of natural laws as relations between these universals *Papers in Metaphysics and Epistemology: Volume 2* David Lewis, 1999-01-13 This volume is devoted to Lewis's work in metaphysics and epistemology Topics covered include properties ontology possibility truthmaking probability the mind body problem vision belief and knowledge The purpose of this collection and the volumes that precede and follow it is to disseminate more widely the work of an eminent and influential contemporary philosopher The volume will serve as a useful work of reference for teachers and students of philosophy The Metaphysics of Donald C. Williams A.R.J. Fisher, 2025-04-29 The thesis of this book is that Williams played a key role in the development and revival of analytic metaphysics This book begins with an account of Williams' approach to philosophy given the rise of realism in the early twentieth century with a focus on his use of induction and parsimony to argue for metaphysical theses such as metaphysical realism and metaphysical naturalism It explains his critique of logical positivism and his defence of an empirical conception of metaphysics which in turn reveals how he took himself to be standing up to rising anti metaphysical trends This book then expounds within the framework of his empirical metaphysics his one category trope ontology and its origins arguing that his systematisation of the concept of an abstract particular or trope is his most novel contribution to analytic ontology This book further presents an original interpretation of his account of concrete objects and abstract universals engaging with current debates in the metaphysics of properties sometimes defending Williams sometimes correcting misinterpretations sometimes critically reassessing his views This book also explains his defence of the four dimensional manifold of time and his objections to competing theories such as the growing block theory and presentism incorporating recently posthumously published work in *The Elements and Patterns of Being* ed A R J Fisher 2018 with up to date references to the latest work in the metaphysics of time Lastly this book analyses Williams's influence on later philosophers such as Lewis and Armstrong and others in Australia drawing from correspondence between Williams Lewis and Armstrong and evaluates his place in the history of analytic philosophy concluding that he played a key role in the development and revival of analytic metaphysics Writing the Book of the World Theodore Sider, 2011-11-24 Theodore Sider presents a broad new vision of metaphysics centred on the idea of structure To describe the world well we must use concepts that carve at the joints so that conceptual structure matches reality's structure This approach illuminates a wide range of topics such as time modality ontology and the status of

metaphysics itself Linguistic Universals and Language Change Jeff Good, 2008-01-24 In this book leading scholars examine and assess rival explanations for linguistic universals and the effectiveness of different models of language change. They illustrate their arguments with a very wide range of reference to the world's languages. **The Philosophical Review**

Jacob Gould Schurman, James Edwin Creighton, Frank Thilly, Gustavus Watts Cunningham, 1914 An international journal of general philosophy *Cross-Linguistic Semantics* Cliff Goddard, 2008-04-10 Cross linguistic semantics investigating how languages package and express meanings differently is central to the linguistic quest to understand the nature of human language. This set of studies explores and demonstrates cross linguistic semantics as practised in the natural semantic metalanguage NSM framework originated by Anna Wierzbicka. The opening chapters give a state of the art overview of the NSM model. Several chapters propose several theoretical innovations and advance a number of original analyses in connection with names and naming clefts and other specificational sentences and discourse anaphora. Subsequent chapters describe and analyse diverse phenomena in ten languages from multiple families, geographical locations and cultural settings around the globe. Three substantial studies document how the metalanguage of NSM semantic primes can be realised in languages of widely differing types: Amharic, Ethiopia; Korean and East Cree. Each constitutes a lexicogrammatical portrait in miniature of the language concerned. Other chapters probe topics such as inalienable possession in Koromu, Papua New Guinea; epistemic verbs in Swedish; hyperpolysemy in Bunuba, Australia; the expression of momentariness in Berber; ethnogeometry in Makasai, East Timor; value concepts in Russian; and virtuous emotions in Japanese. This book will be valuable for linguists working on language description, lexical semantics or the semantics of grammar, for advanced students of linguistics and for others interested in language universals and language diversity. **Linguistics: The Cambridge Survey: Volume 2, Linguistic Theory: Extensions and Implications** Frederick J. Newmeyer, 1988-04-21 *Linguistics: The Cambridge Survey* is a comprehensive introduction to prevalent research in all branches of the field of linguistics, from syntactic theory to ethnography of speaking, from signed language to the mental lexicon, from language acquisition to discourse analysis. Each chapter has been written by a specialist particularly distinguished in his or her field, who has accepted the challenge of reviewing the current issues and future prospects in sufficient depth for the scholar and with sufficient clarity for the student. Each volume can be read independently and has a particular focus. Volume I covers the internal structure of the language faculty itself, while Volume II considers the evidence for and the implications of a generativist approach to language. Psycholinguistics and neurolinguistics are covered in Volume III, and Volume IV concentrates on sociolinguistics and the allied fields of anthropological linguistics and discourse and conversation analysis. Several of the chapters in the work concentrate on the interface between different aspects of linguistic theory or the boundaries between linguistic theory and other disciplines. Thus, in both its scope and in its approach, the Survey is a unique and fundamental work of reference. It undoubtedly fulfils the editor's principal aim of providing a wealth of information, insight and ideas that will excite and

challenge all readers with an interest in linguistics
