Community Practice **Coast Guard ,2007** **Potential Health Risks to DOD Firing-Range Personnel from Recurrent Lead Exposure** National Research Council,Division on Earth and Life Studies,Board on Environmental Studies and Toxicology,Committee on Toxicology,Committee on Potential Health Risks from Recurrent Lead Exposure of DOD Firing Range Personnel,2013-04-20 Lead is a ubiquitous metal in the environment and its adverse effects on human health are well documented Lead interacts at multiple cellular sites and can alter protein function in part through binding to amino acid sulfhydryl and carboxyl groups on a wide variety of structural and functional proteins In addition lead mimics calcium and other divalent cations and it induces the increased production of cytotoxic reactive oxygen species Adverse effects associated with lead exposure can be observed in multiple body systems including the nervous cardiovascular renal hematologic immunologic and reproductive systems Lead exposure is also known to induce adverse developmental effects in utero and in the developing neonate Lead poses an occupational health hazard and the Occupational Safety and Health Administration OSHA developed a lead standard for general industry that regulates many workplace exposures to this metal The standard was promulgated in 1978 and encompasses several approaches for reducing exposure to lead including the establishment of a permissible exposure limit PEL of 50 g m3 in air an 8 hour time weighted average TWA exposure guidelines for instituting medical surveillance guidelines for removal from and return to work and other risk management strategies An action level of 30 g m3 an 8 hour TWA for lead was established to trigger medical surveillance in employees exposed above that level for more than 30 days per year Another provision is that any employee who has a blood lead level BLL of 60 g dL or higher or three consecutive BLLs averaging 50 g dL or higher must be removed from work involving lead exposure An employee may resume work associated with lead exposure only after two BLLs are lower than 40 g dL Thus maintaining BLLs lower than 40 g dL was judged by OSHA to protect workers from adverse health effects The OSHA standard also includes a recommendation that BLLs of workers who are planning a pregnancy be under 30 g dL In light of knowledge about the hazards posed by occupational lead exposure the Department of Defense DOD asked the National Research Council to evaluate potential health risks from recurrent lead exposure of firing range personnel Specifically DOD asked the National Research Council to determine whether current exposure standards for lead on DOD firing ranges protect its workers adequately The committee also considered measures of cumulative lead dose Potential Health Risks to DOD Firing Range Personnel from Recurrent Lead Exposure will help to inform decisions about setting new air exposure limits for lead on firing ranges about whether to implement limits for surface contamination and about how to design lead surveillance programs for range personnel appropriately A Strategy for Assessing and Managing Occupational Exposures Steven D. Jahn,William H. Bullock,Joselito S. Ignacio,2015 Asthma in the Workplace, Fourth Edition Jean-Luc Malo,Moiria Chan-Yeung,David I. Bernstein,2013-05-10 Occupational factors are responsible for a large percentage of cases of asthma in adults of working age Any irritant generated at high concentrations can cause occupational asthma and early diagnosis is critical because cure is

still possible at this stage This latest edition of Asthma in the Workplace reflects the rapid pace of discovery and research in workplace asthma that has taken place in recent years This Fourth Edition retains the international flavor of prior editions with contributions from editors and contributors from around the world Several chapters commence with clinical histories and workplace scenarios relevant to the focus of the chapter making it particularly germane for primary care providers to develop skills in early recognition of the disease Topics discussed include Definitions historical background epidemiology genetics pathophysiology and animal models Guidelines for assessing the worker and the workplace and proposed guidelines for management including compensation aspects Medicolegal aspects prevention and surveillance Detailed information about specific agents including a variety of high and low molecular weight agents Other types of work related asthma conditions such as irritant induced asthma eosinophilic bronchitis and occupational rhinitis This new edition has been significantly restructured and places a greater emphasis on the clinical aspects of management and treatment This heightened focus on practical considerations makes it a truly comprehensive hands on resource for practitioners and researchers in this fast moving field
