Market_Desc Undergraduate and graduate level students of Engineering Engineers and Researchers using numerical methods Special Features A very practical title for students engineers and researchers who apply numerical methods for solving problems using MATLAB Includes exercises problems and solutions with demonstrations through the MATLAB program Solution Manual available for instructors About The Book The objective of this book is to make use of the powerful MATLAB software to avoid complex derivations and to teach the fundamental concepts using the software to solve practical problems The authors use a more practical approach and link every method to real engineering and or science problems The main idea is that engineers don t have to know the mathematical theory in order to apply the numerical methods for solving

their real life problems

Applied Numerical Methods for Chemical Engineers Navid Mostoufi, Alkis

Constantinides, 2022-05-22 Applied Numerical Methods for Chemical Engineers emphasizes the derivation of a variety of numerical methods and their application to the solution of engineering problems with special attention to problems in the chemical engineering field. These algorithms encompass linear and nonlinear algebraic equations, eigenvalue problems, finite difference methods, interpolation, differentiation, and integration, ordinary differential equations, boundary value problems, partial differential equations, and linear and nonlinear regression analysis. MATLAB is adopted as the calculation environment throughout the book because of its ability to perform all the calculations in matrix form, its large library of built-in functions, its strong structural language, and its rich graphical visualization tools. Through this book, students and other users will learn about the basic features, advantages, and disadvantages of various numerical methods, learn and practice many useful m-files developed for different numerical methods, in addition to the MATLAB built-in solvers, develop and set up mathematical models for problems commonly encountered in chemical engineering, and solve chemical engineering related problems through examples and after chapter problems with MATLAB by creating application m-files. Clearly and concisely develops a variety of numerical methods and applies them to the solution of chemical engineering problems. These algorithms encompass linear and nonlinear algebraic equations, eigenvalue problems, finite difference methods, interpolation, linear and nonlinear regression analysis, differentiation, and integration, ordinary differential equations, boundary value problems, and partial differential equations. Includes systematic development of the calculus of finite differences and its application to the integration of differential equations and a detailed discussion of nonlinear regression analysis with powerful programs for implementing multivariable nonlinear regression and statistical analysis of the results. Makes extensive use of MATLAB and Excel with most of the methods discussed implemented into general MATLAB functions. All the MATLAB language scripts developed are listed in the text and included in the book's companion website. Includes numerous real world examples and homework problems drawn from the field of chemical and biochemical engineering.

and Scientists Steven C. Chapra, 2023 This book is designed to support a one semester course in numerical methods. It has been written for students who want to learn and apply numerical methods in order to solve problems in engineering and science. As such, the methods are motivated by problems rather than by mathematics. That said, sufficient theory is provided so that students come away with insight into the techniques and their shortcomings.
