Balancing Water for Humans and Nature

Malin Falkenmark, Johan Rockström, 2004 Balancing Water for

Humans and Nature authored by two of the world's leading experts on water management examines water flows the blood stream of both nature and society in terms of the crucial links balances conflicts and trade offs between human and environmental needs The authors argue that a sustainable future depends fundamentally on our ability to manage these trade offs and encourage long term resilience They advocate an ecohydrological approach to land water environmental problems and advance a strong reasoned argument for viewing precipitation as the gross fresh water resource ultimately responsible for sustaining all terrestrial and aquatic ecosystem services This book makes the most coherent and holistic argument to date for a new ecological approach to understanding and managing water resources for the benefit of all Basing their analysis on per capita needs for an acceptable nutritional diet the authors analyse predictions of the amounts of water needed for global food production by 2050 and identify potential sources Drawing on small scale experiences in Africa and Asia they also cover the vulnerability of the semi arid tropics through a simplified model of green and blue water scarcity components *Water, Sustainable Development and the Nexus* Velma I. Grover, Amani Alfarra, 2019-08-30 Water is intricately linked with food security energy security and sustainable development As the world is moving towards sustainable development goals it is critical to recognize the role of water in attaining these goals The Water Energy Food Nexus draws attention to the complex and interrelated nature of global resource systems and forces us to think about how a decision in one sector impacts other interlinked sectors as well This book looks at the three dimensions of sustainable development environment economics and society and how water is linked with them and explores the nexus approach as a framework to look at the issues and identify solutions **Water Resilience for Human Prosperity** Johan Rockström, Malin Falkenmark, Carl Folke, Mats Lannerstad, Jennie Barron, Elin Enfors, Line Gordon, Jens Heinke, Holger Hoff, Claudia Pahl-Wostl, 2014-03-27 The world's human population now constitutes the largest driving force of changes to the biosphere Emerging water challenges require new ideas for governance and management of water resources in the context of rapid global change This book presents a new approach to water resources addressing global sustainability and focusing on socio ecological resilience to changes Topics covered include the risks of unexpected change human impacts and dependence on global water the prospects for feeding the world's population by 2050 and a pathway for the future The book's innovative and integrated approach links green and blue freshwater with terrestrial and aquatic ecosystem functions and use It also links changes arising from land use alteration with the impacts of those changes on social ecological systems and ecosystem services This is an important state of the art resource for academic researchers and water resource professionals and a key reference for graduate students studying water resource governance and management **SDG6 - Clean Water and Sanitation** Eva Kremere, Edward Morgan, Pedi Obani, 2019-11-29 Bridging academic discussion and real world case studies this book considers the challenge posed by SDG6 of balancing the provision of the basic human right of access to water whilst not eroding our capacity to live sustainably in a rapidly changing world Sustainable Water Use and Management Walter Leal

Scott,2021-09-09 Over the last decade water security has replaced sustainability as the key optic for thinking about how we manage water This reframing has offered benefits including clear recognition of the link between humans the environment and the right to water and also posed challenges the tendency in some quarters to interpret security solely in terms of geopolitical or economic securitisation In this collection the authors offer a radical repositioning of these debates updated to reflect the concerns of our post pandemic world The chapters in this volume examine several different themes including how water security articulates with locality and culture how it operates across spatial scales and its moral ethical resonances The chapters in this book were originally published in the journals Water International and International Journal of Water Resources Development
