Climate Hazard Crises in Asian Societies and Environments Troy Sternberg, 2017-01-20 Climate hazards are the world's most widespread deadliest and costliest natural disasters Knowledge of climate hazard dynamics is critical since the impacts of climate change population growth development projects and migration affect both the impact and severity of disasters Current global events highlight how hazards can lead to significant financial losses increased mortality rates and political instability This book examines climate hazard crises in contemporary Asia identifying how hazards from the Middle East through South and Central Asia and China have the power to reshape our globalised world In an era of changing climates knowledge of hazard dynamics is essential to mitigating disasters and strengthening livelihoods and societies across Asia By integrating human exposure to climate factors and disaster episodes the book explores the environmental forces that drive disasters and their social implications Focusing on a range of Asian countries landscapes and themes the chapters address several scales province national regional different hazards drought flood temperature storms dust environments desert temperate mountain coastal and issues vulnerability development management politics to present a diverse comprehensive evaluation of climate hazards in Asia This book offers an understanding of the challenges climate hazards present their critical nature and the effort needed to mitigate climate hazards in 21st century Asia Climate Hazard Crises in Asian Societies and Environments is vital reading for those interested and engaged in Asia's development and well being today and will be of interest to those working in Geography Development Studies Environmental Sciences Sociology and Political Science

Measuring Vulnerability to Natural Hazards Jörn Birkmann, UNU-EHS Expert Working Group on Measuring Vulnerability, 2013 Climate change adaptation building resilience and vulnerability and risk reduction are noble words but do we really know what is meant by these terms and how to assess their respective progress This book seeks to

address these questions The world has recently experienced disasters of a magnitude rarely seen before the cascading disaster in Japan the earthquake in Haiti and floods in Pakistan and Australia are a few prominent examples These major disasters underline the fact that many communities and world regions are still vulnerable to extreme events and natural hazards Additionally creeping changes such as sea level rise are emerging pressures in the context of climate change These changes are very likely to seriously affect livelihoods in many regions The dynamic and complex interaction between vulnerable communities and climate and non climate related sudden onset and creeping hazards will most likely increase the risk of crises and disasters in the future Following the popularity of the first edition this volume has been completely revised and fully updated This new edition includes the dimension of adaptation to climate change and new risks resulting from climate change It combines practical examples from Africa Asia the Americas and Europe with theoretical and conceptual frameworks It is key reading for all those interested in improving risk reduction and adaptation strategies to extreme events and gradual changes in the context of climate change and natural hazards Publisher s description
