AS9100 AS9110 and AS9120 the quality management system QMS standards for the aerospace industry are written in the most ambiguous language possible Indeed they don t outline how they should be implemented Those decisions are left to the organization implementing their requirements or in some cases to a consultant Although some consultant firms for aerospace systems are excellent there are many that purport to be experts yet proffer systems and processes that are either in contravention to the standards requirements or so unwieldy that they render the process impotent In an effort to simplify these issues this book proposes practices that have been described as opportunities for improvement or best practices by registration auditors in the past It includes a discussion of each of the three standards clauses suggests best practices to comply with them outlines common findings associated with them and provides an overview of the changes to AS9100C from AS9100B
