Acquisition Strategy Guide, 2000-02 4th edition Prepared under contract GS 35F 4033G Provides information that Program Managers should find useful in structuring developing and executing an acquisition strategy

Laboratory Guide to Biochemistry, Enzymology, and Protein Physical Chemistry Marc le Maire, Raymond Chabaud, Guy Hervé, 2012-12-06 The study of a single well chosen

substance here aspartate transcarbamoylase can provide an excellent basis for a laboratory course. The student is introduced to a variety of scientific ideas and to many experimental and interpretive techniques. This enzyme is readily available, is relatively stable, has an extensive literature, and its behavior has many facets: substrate inhibition, a large change in structure upon homotropic activation by substrates, allosteric stimulation by ATP, allosteric inhibition by CTP, synergistic with VTP, positive cooperativity for substrates, negative cooperativity for CTP binding and dissociation, and reassembly of subunits C and R2 from the holoenzyme CI 5. In addition, 3.6 to the known biochemical aspects of these properties, the results obtained here can be interpreted in the light of the high resolution X-ray diffraction structures of the T and R forms, the low angle X-ray scattering results, and the large number of mutants now available by recombinant DNA methods. Future development of this course could also involve part of these methods as well as the carefully chosen experiments described here. This approach resembles research more than the approaches one usually finds in biochemical laboratory courses. A consistent development of ideas about a single enzyme which shows so many facets in its behavior is sure to hold the interest of the student. Moreover, one explores a depth and reasons to move forward that are an essential part of research.
