Assessing 21st Century Skills , *Assessing 21st Century Skills* National Research Council, Division of Behavioral and Social Sciences and Education, Board on Testing and Assessment, Committee on the Assessment of 21st Century Skills, 2011-09-16 The routine jobs of yesterday are being replaced by technology and or shipped off shore In their place job categories that require knowledge management abstract reasoning and personal services seem to be growing The modern workplace requires workers to have broad cognitive and affective skills Often referred to as 21st century skills these skills include being able to solve complex problems to think critically about tasks to effectively communicate with people from a variety of different cultures and using a variety of different

techniques to work in collaboration with others to adapt to rapidly changing environments and conditions for performing tasks to effectively manage one's work and to acquire new skills and information on one's own. The National Research Council (NRC) has convened two prior workshops on the topic of 21st century skills. The first held in 2007 was designed to examine research on the skills required for the 21st century workplace and the extent to which they are meaningfully different from earlier eras and require corresponding changes in educational experiences. The second workshop held in 2009 was designed to explore demand for these types of skills, consider intersections between science education reform goals and 21st century skills, examine models of high quality science instruction that may develop the skills, and consider science teacher readiness for 21st century skills. The third workshop was intended to delve more deeply into the topic of assessment. The goal for this workshop was to capitalize on the prior efforts and explore strategies for assessing the five skills identified earlier. The Committee on the Assessment of 21st Century Skills was asked to organize a workshop that reviewed the assessments and related research for each of the five skills identified at the previous workshops with special attention to recent developments in technology-enabled assessment of critical thinking and problem solving skills. In designing the workshop, the committee collapsed the five skills into three broad clusters as shown below: Cognitive skills (nonroutine problem solving, critical thinking, systems thinking), Interpersonal skills (complex communication, social skills, team work, cultural sensitivity, dealing with diversity), and Intrapersonal skills (self-management, time management, self-development, self-regulation, adaptability, executive functioning). **Assessing 21st Century Skills** provides an integrated summary of the presentations and discussions from both parts of the third workshop.

21st Century Skills Development Through Inquiry-Based Learning Samuel Kai Wah Chu, Rebecca B. Reynolds, Nicole J. Tavares, Michele Notari, Celina Wing Yi Lee, 2016-09-21. This book presents innovative instructional interventions designed to support inquiry project-based learning as an approach to equip students with 21st century skills. Instructional techniques include collaborative team-based teaching, social constructivist game design and game play, and productive uses of social media such as wikis and other online communication affordances. The book will be of interest to researchers seeking a summary of recent empirical studies in the inquiry project-based learning domain that employ new technologies as constructive media for student synthesis and creation. The book also bridges the gap between empirical works and a range of national and international level educational standards frameworks such as the P21, the OECD framework, AASL Standards for the 21st Century Learner, and the Common Core State Standards in the US. Of particular interest to education practitioners, the book offers detailed descriptions of inquiry project-based learning interventions that can be directly reproduced in today's schools. Further, the book provides research-driven guidelines for the evaluation of student inquiry project-based learning. Lastly, it offers education policymakers insight into establishing anchors and spaces for applying inquiry project-based learning opportunities for youth today in the context of existing and current education reform efforts. The aim of this book is to support education leaders, practitioners, and

researchers efforts in advancing inspiring and motivating student learning through transformative social constructivist inquiry based knowledge building with information technologies We propose that preparing students with inquiry mindsets and dispositions can promote greater agency critical thinking and resourcefulness qualities needed for addressing the complex societal challenges they may face

Assessment and Teaching of 21st Century Skills Patrick Griffin, Esther Care, 2014-10-21 This second volume of papers from the ATC21STM project deals with the development of an assessment and teaching system of 21st century skills Readers are guided through a detailed description of the methods used in this process The first volume was published by Springer in 2012 Griffin P McGaw B Care E Eds *Assessment and Teaching of 21st Century Skills* Dordrecht Springer The major elements of this new volume are the identification and description of two 21st century skills that are amenable to teaching and learning collaborative problem solving and learning in digital networks Features of the skills that need to be mirrored in their assessment are identified so that they can be reflected in assessment tasks The tasks are formulated so that reporting of student performance can guide implementation in the classroom for use in teaching and learning How simple tasks can act as platforms for development of 21st century skills is demonstrated with the concurrent technical infrastructure required for its support How countries with different languages and cultures participated and contributed to the development process is described The psychometric qualities of the online tasks developed are reported in the context of the robustness of the automated scoring processes Finally technical and educational issues to be resolved in global projects of this nature are outlined
