Oxford Before the University Anne Dodd, 2003. The name of the city of Oxford is virtually synonymous with that of Oxford University. At the time of its emergence in the historical record, however, the university had taken root in what was already a thriving medieval town. The broad shallow floodplain of the river Thames had encouraged the development of a major river crossing at Oxford and this crossing provided both a focus for a permanent settlement and the name of Oxford by which the settlement came to be known. This volume presents a comprehensive account of archaeological research into the origins and development of Oxford from the 7th century when St Frideswide's Minster was established through the subsequent development of Oxford as a Saxon burh or centre of defence against the Vikings until the end of the 12th century when the existence of a fledgling university is first apparent. It includes reports on some 18 previously unpublished archaeological sites. The chapters are treated thematically and cover the Thames Crossing, the defences and the developing town with its streets, properties, houses and churches. Each report is preceded by a synthesis and discussion of the evidence which traces the development of theories about the Anglo Saxon town and reviews the many problems that still exist. This discussion is supported by a gazetteer of relevant archaeological observations in the historic core of the city. There is also a detailed review of the development of the river Thames and its floodplain at Oxford.

English Medieval Alabasters Francis W. Cheetham, 2005. Francis Cheetham's classic survey of English medieval alabasters includes a richly illustrated catalogue of the Victoria and Albert Museum's unparalleled collection. English alabasters represent a unique contribution to medieval art. Less sophisticated perhaps than other contemporary forms of religious art, they were a neglected area of study until this volume was first published in 1984. Stories from the New Testament and The Golden Legend were the most favoured subjects and the numerous examples that survive in churches and museums throughout Europe attest to their wide and enduring appeal. Francis Cheetham examines here all aspects of their production and demonstrates how the panels and altarpieces can aid our understanding of life and devotional practice in medieval times. At the heart of this fascinating study is a richly illustrated catalogue of the 260 examples in the collection of London's Victoria and Albert Museum, a collection so comprehensive that it would be possible to write a survey of the subject almost without recourse to pieces elsewhere. As Sir Roy Strong notes in his Foreword, their division into subject categories is an invaluable aid to identification and classification.

The late Francis Cheetham was an acknowledged expert on medieval English alabasters and this reissue of his classic work will be welcomed by historians art historians collectors and dealers alike taking its place alongside his *Alabaster Images of Medieval England* which was published by the Boydell Press in 2003
