Animals As Biotechnology Ethics Sustainability And Critical Animal Studies Science In Society:

Animals as Biotechnology Richard Twine, 2010-09-23 In *Animals as Biotechnology* sociologist Richard Twine places the question of human animal relations at the heart of sustainability and climate change debates. The book is shaped by the emergence of two contradictory trends within our approach to nonhuman animals: the biotechnological turn in animal sciences which aims to increase the efficiency and profitability of meat and dairy production, and the emerging field of critical animal studies mostly in the humanities and social sciences which works to question the nature of our relations with other animals. The first part of the book focuses on ethics, examining critically the dominant paradigms of bioethics and power relations between human and non-human. The second part considers animal biotechnology and political economy, examining commercialisation and regulation. The final part of the book centres on discussions of sustainability limits and an examination of the prospects for animal ethics if biotechnology becomes part of the dominant agricultural paradigm. Twine concludes by considering whether growing calls to reduce our consumption of meat and dairy products in the face of climate change threats are in fact complicit with an anthropocentric understanding of sustainability, and that what is needed is a more fundamental ethical and political questioning of relations and distinctions between humans, animals, and nature. **The Oxford**

Handbook of Animal Studies Linda Kalof, 2017 *The Oxford Handbook of Animal Studies* tackles the infamous animal question: how can humans rethink and reconfigure their relationships with other animals? Over the course of five sections and thirty chapters, the contributors investigate issues and concepts central to understanding our current relationship with other animals and the potential for coexistence in an ecological community of living beings. Rebekah Humphreys, 2023-06-20 With an ever-growing body of evidence on the links between different oppressions, never have the debates in Critical Animal Studies surrounding intersectionality in relation to animal ethics been more important. In particular, the arguments related to anthropomorphic attributes of mentality to other than humans promise to provide fruitful new ground for re-assessing human animal relations. This book maps the central debates surrounding anthropomorphism in relation to our descriptions of animals, their lives, animal mentality, and meaningful communication in the nonhuman world. Rebekah Humphreys synthesizes the work of critical animal theorists, philosophers, and cognitive ethologists, and provides a critical account of how the debates concerning anthropomorphism play a key role in a proper understanding of animal ethics.

[The Politics of Species](#) Raymond Corbey, Annette Lanjouw, 2013-09-05 The assumption that humans are cognitively and morally superior to other animals is fundamental to social democracies and legal systems worldwide. It legitimises treating members of other animal species as inferior to humans. The last few decades have seen a growing awareness of this issue as evidence continues to show that individuals of many other species have rich mental, emotional, and social lives. Bringing together leading experts from a range of disciplines, this volume identifies the key barriers to a definition of moral respect that includes nonhuman animals. It sets out to increase concern, empathy, and inclusiveness by developing strategies that can

be used to protect other animals from exploitation in the wild and from suffering in captivity The chapters link scientific data with normative and philosophical reflections offering unique insight into controversial issues around the ethical political and legal status of other species

Schizoanalysis and Animal Science Education Helena Pedersen, 2019-02-07 Within the education system acts of violence toward animals take place and are manifested on a routine basis in science classes in lecture halls in school canteens and during study visits to zoos farms and slaughterhouses Taken for granted as necessary for teaching and learning this violence profoundly affects animals as well as students It also provides new entry points for understanding education as a multispecies power regime driven by numerous other investments than knowledge dissemination alone What then is the nature of this educational violence and how exactly does education work through techniques of interference with student and animal bodies Based on ethnographic research within upper secondary schools and higher education this book challenges the use of animals in education by innovative engagement of Deleuze and Guattari's tool of schizoanalysis Sparking a fundamental rethinking of educational processes relations and aims the book explores how scientific knowledge about animals proliferates through complex interplay of power and desire in contested spaces of teaching and learning Configuring animal science education as a set of machines working in tandem with the animal industry Helena Pedersen offers radical new insights into how education forms subjectivities and social orders under conditions of capitalist expansion that capture students and animals alike Bringing together education studies science studies critical animal studies and continental philosophy Pedersen also provides examples of disruptive action that can put education to work for transformation and liberation

Livestock and Literature Liza B. Bauer, 2024-08-08 This book explores the past and current traces that cows pigs chickens and other animals used by humans have left in Anglophone literary fiction In times of accelerated global warming an acute pandemic and breakthroughs in bioengineering practices discussions on how to rethink the relationships to these animals have become as heated as perhaps never before Livestock and Literature examines what literature has to contribute to these debates In particular it draws on counter narratives to so called livestock animals commodification in selected science and speculative fiction SF works from the twenty first century These texts imagine what if scenarios where livestock practice resistance transform into biotechnologically modified postanimal beings or live in close companionship to humans Via these three points of access the study delineates the formal and thematic strategies SF authors apply to challenge anthropocentric and speciesist thought patterns The aim is to shed light on how these alternative storyworlds expand readers understanding of the lives of farmed animals seeking insight into how literature shapes human animal relationships beyond the page

Dynamics of Disaster Barbara Allen, Rachel A. Dowty Beech, 2013-09-13 Disasters are the result of complex interactions between social and natural forces acting at multiple scales from the individual and community to the organisational national and international level Effective disaster planning response and recovery require an understanding of these interacting forces and the role of power knowledge and organizations This book sheds new light on

these dynamics and gives disaster scholars and practitioners new and valuable lessons for management and planning in practice The authors draw on methods across the social sciences to examine disaster response and recovery as viewed by those in positions of authority and the recipients of operations These first two sections examine cases from Hurricane Katrina while the third part compares this to other international disasters to draw out general lessons and practical applications for disaster planning in any context The authors also offer guidance for shaping institutional structures to better meet the needs of communities and residents

Rationality and Ritual Brian Wynne, 2013-11-12 In *Rationality and Ritual* internationally renowned expert Brian Wynne offers a profound analysis of science and technology policymaking By focusing on an episode of major importance in Britain's nuclear history the Windscale Inquiry a public hearing about the future of fuel reprocessing he offers a powerful critique of such judicial procedures and the underlying assumptions of the rationalist approach This second edition makes available again this classic and still very relevant work Debates about nuclear power have come to the fore once again Yet we still do not have adequate ways to make decisions or frame policy deliberation on these big issues involving true public debate rather than ritualistic processes in which the rules and scope of the debate are presumed and imposed by those in authority The perspectives in this book are as significant and original as they were when it was written The new edition contains a substantial introduction by the author reflecting on changes and lack of in the intervening years and introducing new themes relevant to today's world of big science and technology that can be drawn out of the original text A new foreword by Gordon MacKerron an expert on energy and nuclear policy sets this seminal work in the context of contemporary nuclear and related big technology debates

Animal Oppression and Capitalism David Nibert, 2017-09-08 This important two volume set unapologetically documents how capitalism results in the oppression of animals ranging from fish and chickens to dogs elephants and kangaroos as well as in environmental destruction vital resource depletion and climate change Most traditional narratives portray humanity's use of other animals as natural and necessary for human social development and present the idea that capitalism is generally a positive force in the world But is this worldview accurate or just a convenient easy to accept way to ignore what is really happening a systematic oppression of animals that simultaneously results in environmental destruction and places insurmountable obstacles in the path to a sustainable and peaceful future David Nibert's *Animal Oppression and Capitalism* is a timely two volume set that calls into question the capitalist system at a point in human history when inequality and the imbalance in the distribution of wealth are growing domestically and internationally Expert contributors show why the oppression of animals particularly the use of other animals as food is increasingly being linked to unfavorable climate change and the depletion of fresh water and other vital resources Readers will also learn about the tragic connections between the production of animal products and global hunger and expanded regional violence and warfare and they will understand how many common human health problems including heart attacks strokes and various forms of cancer develop as a result of consuming animal products
