Hybrid Intelligent Systems for Pattern Recognition Using Soft Computing Patricia Melin, Oscar Castillo, 2005-03-08 This monograph describes new methods for intelligent pattern recognition using soft computing techniques including neural networks fuzzy logic and genetic algorithms Hybrid intelligent systems that combine several soft computing techniques are needed due to the complexity of pattern recognition problems Hybrid intelligent systems can have different architectures which have an impact on the efficiency and accuracy of pattern recognition systems to achieve the ultimate goal of pattern recognition This book also shows results of the application of hybrid intelligent systems to real world problems of face fingerprint and voice recognition This monograph is intended to be a major reference for scientists and engineers applying new computational and mathematical tools to intelligent pattern recognition and can be also used as a textbook for graduate courses in soft computing intelligent pattern recognition computer vision or applied artificial intelligence

Handbook Of Accelerator Physics And Engineering (Third Edition) Alexander Wu Chao, Maury Tigner, Hans Weise, Frank Zimmermann, 2023-02-02 Edited by internationally recognized authorities in the field this expanded and updated new edition of the bestselling Handbook containing many new articles is aimed at the design and operation of modern particle accelerators It is intended as a vade mecum for professional engineers and physicists engaged in these subjects With a collection of more than 2000 equations 300 illustrations and 500 graphs and tables here one will find in addition to common formulae of previous compilations hard to find specialized formulae recipes and material data pooled from the lifetime experience of many of the world s most able practioners of the art and science of accelerators The seven chapters include both theoretical and practical matters as well as an extensive glossary of accelerator types Chapters on beam dynamics and electromagnetic and nuclear interactions deal with linear and nonlinear single particle and collective effects including spin motion beam environment beam beam beam electron beam ion and intrabeam interactions The impedance concept and related calculations are dealt with at length as are the instabilities due to the various interactions mentioned A chapter on operational considerations including discussions on the assessment and correction of orbit and optics errors realtime feedbacks generation of short photon pulses bunch compression phase space exchange tuning of normal and superconducting linacs energy recovery linacs free electron lasers cryogenic vacuum systems steady state microbunching cooling space charge compensation brightness of light sources collider luminosity optimization and collision schemes machine learning multiple frequency rf systems FEL seeding ultrafast electron diffraction and Gamma Factory Chapters on mechanical and electrical considerations present material data and important aspects of component design including heat transfer and refrigeration Hardware systems for particle sources feedback systems confinement including undulators and acceleration both normal and superconducting receive detailed treatment in a sub systems chapter beam measurement and apparatus being treated therein as well A detailed name and subject index is provided together with reliable references to

Power Magnetic Devices Scott D. Sudhoff, 2014-01-30 Presents a multi objective design approach to the many power magnetic devices in use today Power Magnetic Devices A Multi Objective Design Approach addresses the design of power magnetic devices including inductors transformers electromagnets and rotating electric machinery using a structured design approach based on formal single and multi objective optimization The book opens with a discussion of evolutionary computing based optimization Magnetic analysis techniques useful to the design of all the devices considered in the book are then set forth This material is then used for inductor design so readers can start the design process Core loss is next considered this material is used to support transformer design A chapter on force and torque production feeds into a chapter on electromagnet design This is followed by chapters on rotating machinery and the design of a permanent magnet AC machine Finally enhancements to the design process including thermal analysis and AC conductor losses due to skin and proximity effects are set forth Power Magnetic Devices Focuses on the design process as it relates to power magnetic devices such as inductors transformers electromagnets and rotating machinery Offers a structured design approach based on single and multi objective optimization Helps experienced designers take advantage of new techniques which can yield superior designs with less engineering time Provides numerous case studies throughout the book to facilitate readers comprehension of the analysis and design process Includes Powerpoint slide based student and instructor lecture notes and MATLAB based examples toolboxes and design codes Designed to support the educational needs of students Power Magnetic Devices A Multi Objective Design Approach also serves as a valuable reference tool for practicing engineers and designers MATLAB examples are available via the book support site
