arenas In this book scholars from the social sciences humanities and computer science argue that this shift has and will continue to have profound implications for how knowledge is produced and what and whose knowledge is valued and deemed valid To attend to this fundamental change the authors propose the concept of algorithmic regimes and demonstrate how they transform the epistemological methodological and political foundations of knowledge production sensemaking and decision making in contemporary societies Across sixteen chapters the volume offers a diverse collection of contributions along three perspectives on algorithmic regimes the methods necessary to research and design algorithmic regimes the ways in which algorithmic regimes reconfigure sociotechnical interactions and the politics engrained in algorithmic regimes
